Support

This integration is designated as **ThreatQ Supported**.

Support Email: support@threatq.com

Support Web: <https://support.threatq.com>

Support Phone: 703.574.9893

Integrations/apps/add-ons designated as **ThreatQ Supported** are fully supported by ThreatQuotient's Customer Support team.

ThreatQuotient strives to ensure all ThreatQ Supported integrations will work with the current version of ThreatQuotient software at the time of initial publishing. This applies for both Hosted instance and Non-Hosted instance customers.

ThreatQuotient does not provide support or maintenance for integrations, apps, or add-ons published by any party other than ThreatQuotient, including third-party developers.

Integration Details

ThreatQuotient provides the following details for this integration:

Current Integration Version 1.0.1

Compatible with ThreatQ Versions >= 5.12.1

ThreatQ TQO License Required Yes

Support Tier ThreatQ Supported

Introduction

The National Vulnerability Database (NVD) CVE action submits a ThreatQ data collection, consisting of CVEs and Vulnerabilities, to NVD for enrichment. NVD returns detailed information that is then ingested back into ThreatQ.

The integration provides the following action:

- **NVD CVE** - submits CVEs and Vulnerabilities to be enriched.

The action is compatible with the following system objects:

- CVEs (indicators)
- Vulnerabilities

The action returns the following enriched system objects:

- Indicators
 - Indicator attributes
- Vulnerabilities
 - Vulnerability Attributes

This action is intended for use with ThreatQ TDR Orchestrator (TQO). An active TQO license is required for this feature.

Prerequisites

- An active ThreatQ TDR Orchestrator (TQO) license.
- A data collection containing at least of the following object types:
 - CVE (indicator)
 - Vulnerability

Installation

Perform the following steps to install the integration:

The same steps can be used to upgrade the integration to a new version.

1. Log into <https://marketplace.threatq.com/>.
2. Locate and download the action zip file.
3. Navigate to the integrations management page on your ThreatQ instance.
4. Click on the **Add New Integration** button.
5. Upload the action file using one of the following methods:
 - Drag and drop the file into the dialog box
 - Select **Click to Browse** to locate the integration file on your local machine

ThreatQ will inform you if the action already exists on the platform and will require user confirmation before proceeding. ThreatQ will also inform you if the new version of the action contains changes to the user configuration. The new user configurations will overwrite the existing ones for the action and will require user confirmation before proceeding.

You will still need to [configure](#) the action.

Configuration

ThreatQuotient does not issue API keys for third-party vendors. Contact the specific vendor to obtain API keys and other integration-related credentials.

To configure the integration:

1. Navigate to your integrations management page in ThreatQ.
2. Select the **Actions** option from the *Category* dropdown (optional).
3. Click on the action entry to open its details page.
4. Enter the following parameters under the **Configuration** tab:

The configurations set on this page will be used as the default settings when inserting this action into a new workflow. Updating the configurations on this page will not update any instances of this action that have already been deployed to a workflow. In that scenario, you must update the action's configurations within the workflow itself.

PARAMETER	DESCRIPTION
Input Object Type	Select the type of objects to be enriched. Options include: <ul style="list-style-type: none">◦ Indicator◦ Vulnerability
Save CVE Data As	Select how the enriched objects should be saved. Options include: <ul style="list-style-type: none">◦ Indicator◦ Vulnerability
For Each Vulnerability Found Return the Following	Select the data that will be returned with each vulnerability. Options include:

PARAMETER	DESCRIPTION
	<ul style="list-style-type: none"> ◦ CVSS V3 Score (default) ◦ CWE ◦ Description (default) ◦ Reference Information ◦ Severity (default)
Verify SSL	If enabled, the action will verify SSL connections with the provider.
Objects per Run	The max number of objects to submit per action.

The screenshot shows the configuration interface for the NVD Action. On the left, there's a sidebar with the NVD logo, an 'Uninstall' button, and sections for 'Additional Information' (Integration Type: Action, Version: 5, Action ID: 5, Accepted Data Types: Indicators, Vulnerability), 'Indicators' (CVE), and 'Vulnerability'. The main area is titled 'Configuration' and contains the following fields:

- Input Object Type:** Indicator
- Save CVE Data As:** Vulnerabilities
- For Each Vulnerability Found Return The Following:**
 - CVSS v3 Score
 - CWE
 - Description
 - Reference Information
 - Severity
- Verify SSL:** If true, specifies that this feed should verify SSL connections with the provider.
- Objects Per Run:** 1000

A 'Save' button is at the bottom.

5. Review any additional settings, make any changes if needed, and click on **Save**.

Action Functions

The following action is available with the integration:

ACTION	DESCRIPTION	OBJECT TYPE	OBJECT SUBTYPE
NVD	Submits CVEs and Vulnerabilities to be enriched.	Indicators, Vulnerabilities	CVE
CVE			

NVD CVE

The NVD CVE action enriches the selected collection of CVE indicators and Vulnerabilities.

The objects sent to NVD and how the enriched data is saved can be configured in the action's [configuration settings](#).

```
GET https://services.nvd.nist.gov/rest/json/cves/2.0?cveId={cve}
```

Enriched Data

Object counts and action runtime are supplied as generalities only - objects returned by a provider can differ based on credential configurations and action runtime may vary based on system resources and load.

METRIC	RESULT
Run Time	1 minute
Indicators	1
Indicator Attributes	22

Known Issues / Limitations

- A 7-second delay has been applied to the action to avoid the NIST rate limit. This will prevent the NIST firewall rules rejecting requests.

Change Log

- Version 1.0.1
 - Added support for Vulnerabilities to be sent for enrichment.
 - Added three new configuration fields: **Input Object Type**, **Save CVE Data As**, and **For Each Vulnerability Found Return the Following**.
- Version 1.0.0
 - Initial release
