Support

This integration is designated as **ThreatQ Supported**.

Support Email: support@threatq.com

Support Web: <https://support.threatq.com>

Support Phone: 703.574.9893

Integrations/apps/add-ons designated as **ThreatQ Supported** are fully supported by ThreatQuotient's Customer Support team.

ThreatQuotient strives to ensure all ThreatQ Supported integrations will work with the current version of ThreatQuotient software at the time of initial publishing. This applies for both Hosted instance and Non-Hosted instance customers.

ThreatQuotient does not provide support or maintenance for integrations, apps, or add-ons published by any party other than ThreatQuotient, including third-party developers.

Integration Details

ThreatQuotient provides the following details for this integration:

Current Integration Version	1.0.0
-----------------------------	-------

Compatible with ThreatQ Versions	>= 5.12.1
-------------------------------------	-----------

ThreatQ TQO License Required	Yes
---------------------------------	-----

Support Tier	ThreatQ Supported
--------------	-------------------

Introduction

The ThreatQ Intel Requirement Mapper action is designed to automatically map your Intel Requirements to incoming threat intelligence. This saves your team time by allowing them to focus on the most critical threats and take action to mitigate threats/prevent future attacks.

The integration provides the following action:

- **ThreatQ Intel Requirement Mapper** - automatically maps your Intel Requirements to incoming threat intelligence.

The action is compatible with the following system object types:

- Adversary
- Campaign
- Event
- Incident
- Malware
- Report

The action returns the following enriched system objects:

- Adversary
- Campaign
- Event
- Incident
- Intel Requirement (custom object)
- Malware
- Report

This action is intended for use with ThreatQ TDR Orchestrator (TQO). An active TQO license is required for this feature.

Prerequisites

- An active ThreatQ TDR Orchestrator (TQO) license.
- A data collection containing at least one of the following object types:
 - Adversary
 - Campaign
 - Event
 - Incident
 - Malware
 - Report
- The [Intel Requirement](#) custom object installed on your ThreatQ instance.

Intel Requirement Custom Object

The integration requires the Intel Requirement custom object.

Use the steps provided to install the Intel Requirement custom object.

When installing the custom objects, be aware that any in-progress feed runs will be cancelled, and the API will be in maintenance mode.

ThreatQ V6 Steps

Use the following steps to install the custom object in ThreatQ v6:

1. Download the integration bundle from the ThreatQ Marketplace.
2. Unzip the bundle and locate the custom object files.

The custom object files will typically consist of a JSON definition file, install.sh script, and a images folder containing the svg icons.

3. SSH into your ThreatQ instance.
4. Navigate to the tmp folder:

```
cd /var/lib/threatq/misc/
```

5. Upload the custom object files, including the images folder.

The directory structure should be as the following:

- misc
 - install.sh
 - <custom_object_name>.json
 - images (directory)
 - <custom_object_name>.svg

6. Run the following command:

```
kubectl exec -it deployment/api-schedule-run -n threatq -- sh /var/lib/threatq/misc/install.sh /var/lib/threatq/misc
```

The installation script will automatically put the application into maintenance mode, move the files to their required directories, install the custom object, update permissions, bring the application out of maintenance mode, and restart dynamo.

7. Delete the install.sh, definition json file, and images directory from the misc directory after the object has been installed as these files are no longer needed.

ThreatQ v5 Steps

1. Download the integration zip file from the ThreatQ Marketplace and unzip its contents.
2. SSH into your ThreatQ instance.
3. Navigate to tmp directory:

```
cd /tmp/
```

4. Create a new directory:

```
mkdir intel_act
```

5. Upload the **intel_requirement.json** and **install.sh** script into this new directory.
6. Create a new directory called **images** within the **intel_act** directory.

```
mkdir images
```

7. Upload the **intel_requirement.svg**.
8. Navigate to the **/tmp/intel_act**.

The directory should resemble the following:

- tmp
 - intel_act
 - intel_requirement.json
 - install.sh
 - images
 - intel_requirement.svg

9. Run the following command to ensure that you have the proper permissions to install the custom object:

```
chmod +x install.sh
```

10. Run the following command:

```
sudo ./install.sh
```

You must be in the directory level that houses the **install.sh** and **json** files when running this command.

The installation script will automatically put the application into maintenance mode, move the files to their required directories, install the custom object, update permissions, bring the application out of maintenance mode, and restart dynamo.

11. Remove the temporary directory, after the custom object has been installed, as the files are no longer needed:

```
rm -rf intel_act
```

Installation

The action requires the installation of Intel Requirement custom object. The custom object must be installed prior to installing the action. Attempting to install the action without the custom object will cause the install process to fail. See the [Prerequisites](#) chapter for more details.

Perform the following steps to install the integration:

The same steps can be used to upgrade the integration to a new version.

1. Log into <https://marketplace.threatq.com/>.
2. Locate and download the compressed action and extract its files.
3. Install the required [Intel Requirement custom object](#) if you have not done so already.
4. Navigate to the integrations management page on your ThreatQ instance.
5. Click on the **Add New Integration** button.
6. Upload the action zip file using one of the following methods:
 - Drag and drop the zip file into the dialog box
 - Select **Click to Browse** to locate the zip file on your local machine

ThreatQ will inform you if the action already exists on the platform and will require user confirmation before proceeding. ThreatQ will also inform you if the new version of the action contains changes to the user configuration. The new user configurations will overwrite the existing ones for the action and will require user confirmation before proceeding.

You will still need to [configure](#) the action.

Configuration

ThreatQuotient does not issue API keys for third-party vendors. Contact the specific vendor to obtain API keys and other integration-related credentials.

To configure the integration:

1. Navigate to your integrations management page in ThreatQ.
2. Select the **Actions** option from the *Category* dropdown (optional).
3. Click on the action entry to open its details page.
4. Enter the following parameters under the **Configuration** tab:

The configurations set on this page will be used as the default settings when inserting this action into a new workflow. Updating the configurations on this page will not update any instances of this action that have already been deployed to a workflow. In that scenario, you must update the action's configurations within the workflow itself.

PARAMETER	DESCRIPTION
Use Intel 471's General Intelligence Requirements	Enable this parameter for action to use Intel 471's General Intelligence Requirements (GIRs) to map to your incoming threat intelligence. Disable this parameter to only use your own custom mappings. This parameter is enabled by default.
General Intel Requirement ID Whitelist (Recommended)	Enter the line separated list of Intel 471 General Intel Requirement (GIRs) IDs to match on. ThreatQuotient strongly recommends against leaving this parameter blank as it will result in matching against all Intel Requirement keywords (~2200).  This parameter is only accessible if the Use Intel 471's General Intelligence Requirements field is enabled.
Custom Intel Requirement Mapping	Enter the line separated list of custom mappings to match on. Each mapping should be the keyword to match on, followed by a colon, and then the Intel Requirement ID and Value to map to, separated by a hyphen.

PARAMETER

DESCRIPTION

This user field supports up to 16k characters. If your mapping is larger than that, please split this workflow into multiple to avoid mapping issues.

This mapping will also be used in addition to the Intel 471 General Intelligence Requirements when enabled.

Objects Per Run

The max number of objects to send to this action per run.

Action ID: 1

Accepted Data Types:

Malware

Adversaries

Events

Report

Campaign

Incident

Configuration

Overview

This action allows you to automatically create relationships based on your team's Intelligence Requirements.

By default, this action will utilize Intel 471's General Intelligence Requirements (GIRs) to map to your incoming threat intelligence. If you would like to only use your own custom mappings, uncheck the corresponding box below. You'll also be able to enter your own custom mappings, which you can use standalone or in addition to the Intel 471 GIRs.

Mapping Configuration

☒ Use Intel 471's General Intelligence Requirements

By default, this action uses Intel 471's General Intelligence Requirements (GIRs) to map to your incoming threat intelligence. If you would like to only use your own custom mappings, uncheck this box.

General Intel Requirement ID Whitelist (Recommended)

Enter the list of Intel 471 General Intel Requirement IDs to match on. One ID per line. Entering nothing will match against all Intel Requirement keywords (~2200), which is not recommended. Select the Intel 471 GIRs that are relevant to your organization.

Custom Intel Requirement Mapping

Enter the list of custom mappings to match on. One mapping per line. Each mapping should be the keyword to match on, followed by a colon, and then the Intel Requirement ID and Value to map to, separated by a hyphen. This user field supports up to 16k characters. If your mapping is larger than that, please split this workflow into multiple to avoid mapping issues. This mapping will also be used in addition to the Intel 471 General Intelligence Requirements (when enabled).

Workflow Options

Objects Per Run

10000

The max number of objects to send to this action, per run.

5. Review any additional settings, make any changes if needed, and click on **Save**.

Actions

The following action is available:

ACTION	DESCRIPTION	OBJECT TYPE	OBJECT SUBTYPE
ThreatQ Intel Requirement Mapper	Automatically map your Intel Requirements to incoming threat intelligence	Malware, Adversary, Event, Campaign, Incident, Report	N/A

ThreatQ Intel Requirement Mapper

The ingested data for the action depends on the selected objects and content.

If the **Use Intel 471's General Intelligence Requirements** parameter is enabled, the action searches for the keywords present in the list in all the descriptions and attributes of a ThreatQ object. The found keywords are then mapped to the corresponding Intel 471's General Intelligence Requirements and are related to the object. See full list of GIRs in the [Intel 471's General Intelligence Requirements](#) section of this guide.

All the list entries follow the pattern: `<Text>: <ID> - <Value>`.

Examples include:

```
# <Text>: <ID> - <Value>
malware: 1 - Malware
proxy malware: 1.1.13 - Proxy malware
fraud: 4 - Fraud, Identity Theft and Unauthorized Access
```

A subset of Intel 471's General Intelligence Requirements can be added to the user configuration **General Intel Requirement ID Whitelist** (Recommended). Use this to select the Intel 471 GIRs that are relevant to your organization.

Examples include:

```
1
4.1.6
2.1.1.1
```

A custom mapping can be specified in user configuration **Custom Intel Requirement Mapping**. One mapping per line. Each mapping should be the keyword to match on, followed by a colon, and then the Intel Requirement ID and Value to map to, separated by a hyphen. This user field supports up to 16k characters. If your mapping is larger than that, please split this workflow into multiple to avoid mapping issues. This mapping will also be used in addition to the Intel 471 General Intelligence Requirements (when enabled).

Examples include:

```
elf malware: 1 - Malware
nmap: 1.3.11.2 - Network scanners
```

blockchain vulnerability: 2.1.11 - Cryptocurrency and exchanges vulnerabilities
crypto exploit: 2.1.11 - Cryptocurrency and exchanges vulnerabilities
software vulnerability: 2.1.2 - Software and web application vulnerabilities
web app vulnerability: 2.1.2 - Software and web application vulnerabilities
application flaw: 2.1.2 - Software and web application vulnerabilities
software exploit: 2.1.2 - Software and web application vulnerabilities
web application security: 2.1.2 - Software and web application vulnerabilities
browser exploit: 2.1.2.1 - Web browser vulnerabilities
browser vulnerability: 2.1.2.1 - Web browser vulnerabilities
web browser flaw: 2.1.2.1 - Web browser vulnerabilities
browser security hole: 2.1.2.1 - Web browser vulnerabilities
browser patch: 2.1.2.1 - Web browser vulnerabilities
office software vulnerability: 2.1.2.2 - Office or productivity software vulnerabilities
productivity software flaw: 2.1.2.2 - Office or productivity software vulnerabilities
office exploit: 2.1.2.2 - Office or productivity software vulnerabilities
productivity software security: 2.1.2.2 - Office or productivity software

vulnerabilities

office patch: 2.1.2.2 - Office or productivity software vulnerabilities

open source vulnerability: 2.1.2.3 - Open source software library

vulnerabilities

library vulnerability: 2.1.2.3 - Open source software library vulnerabilities

open source flaw: 2.1.2.3 - Open source software library vulnerabilities

library exploit: 2.1.2.3 - Open source software library vulnerabilities

open source security: 2.1.2.3 - Open source software library vulnerabilities

protocol vulnerability: 2.1.3 - Protocol vulnerabilities

network protocol flaw: 2.1.3 - Protocol vulnerabilities

protocol exploit: 2.1.3 - Protocol vulnerabilities

protocol security hole: 2.1.3 - Protocol vulnerabilities

protocol patch: 2.1.3 - Protocol vulnerabilities

server exploit: 2.1.4 - Server platform vulnerabilities

server platform vulnerability: 2.1.4 - Server platform vulnerabilities

server flaw: 2.1.4 - Server platform vulnerabilities

server security: 2.1.4 - Server platform vulnerabilities

platform patch: 2.1.4 - Server platform vulnerabilities

database vulnerability: 2.1.4.1 - Database server vulnerabilities

db server flaw: 2.1.4.1 - Database server vulnerabilities

database exploit: 2.1.4.1 - Database server vulnerabilities

database security hole: 2.1.4.1 - Database server vulnerabilities

db patch: 2.1.4.1 - Database server vulnerabilities

web server vulnerability: 2.1.4.2 - Web server vulnerabilities

web server flaw: 2.1.4.2 - Web server vulnerabilities

web server exploit: 2.1.4.2 - Web server vulnerabilities

web server security: 2.1.4.2 - Web server vulnerabilities

web server patch: 2.1.4.2 - Web server vulnerabilities

email server vulnerability: 2.1.4.3 - Email server vulnerabilities

email server flaw: 2.1.4.3 - Email server vulnerabilities

email exploit: 2.1.4.3 - Email server vulnerabilities

email server security: 2.1.4.3 - Email server vulnerabilities

email server patch: 2.1.4.3 - Email server vulnerabilities

cms vulnerability: 2.1.4.4 - Content management server vulnerabilities

content management flaw: 2.1.4.4 - Content management server vulnerabilities

cms exploit: 2.1.4.4 - Content management server vulnerabilities

content management security: 2.1.4.4 - Content management server

vulnerabilities

cms patch: 2.1.4.4 - Content management server vulnerabilities

app server vulnerability: 2.1.4.5 - Application server vulnerabilities

application server flaw: 2.1.4.5 - Application server vulnerabilities

app server exploit: 2.1.4.5 - Application server vulnerabilities

application server security: 2.1.4.5 - Application server vulnerabilities

app server patch: 2.1.4.5 - Application server vulnerabilities

identity server vulnerability: 2.1.4.6 - Identity management or authentication

server vulnerabilities

authentication server flaw: 2.1.4.6 - Identity management or authentication

server vulnerabilities

identity management exploit: 2.1.4.6 - Identity management or authentication

server vulnerabilities

authentication security hole: 2.1.4.6 - Identity management or authentication

server vulnerabilities
identity server patch: 2.1.4.6 - Identity management or authentication server vulnerabilities
network appliance vulnerability: 2.1.5 - Network appliance or endpoint vulnerabilities
endpoint vulnerability: 2.1.5 - Network appliance or endpoint vulnerabilities
network device flaw: 2.1.5 - Network appliance or endpoint vulnerabilities
endpoint exploit: 2.1.5 - Network appliance or endpoint vulnerabilities
network security patch: 2.1.5 - Network appliance or endpoint vulnerabilities
cloud vulnerability: 2.1.6 - Cloud computing or storage vulnerabilities
cloud security flaw: 2.1.6 - Cloud computing or storage vulnerabilities
cloud exploit: 2.1.6 - Cloud computing or storage vulnerabilities
cloud storage vulnerability: 2.1.6 - Cloud computing or storage vulnerabilities
cloud patch: 2.1.6 - Cloud computing or storage vulnerabilities
hardware vulnerability: 2.1.7 - Hardware vulnerabilities
device security flaw: 2.1.7 - Hardware vulnerabilities
hardware exploit: 2.1.7 - Hardware vulnerabilities
hardware security: 2.1.7 - Hardware vulnerabilities
device patch: 2.1.7 - Hardware vulnerabilities
ics vulnerability: 2.1.8 - Industrial control systems (ICS) or supervisory control and data acquisition (SCADA) vulnerabilities (deprecated)
scada vulnerability: 2.1.8 - Industrial control systems (ICS) or supervisory control and data acquisition (SCADA) vulnerabilities (deprecated)
industrial control flaw: 2.1.8 - Industrial control systems (ICS) or supervisory control and data acquisition (SCADA) vulnerabilities (deprecated)
scada exploit: 2.1.8 - Industrial control systems (ICS) or supervisory control and data acquisition (SCADA) vulnerabilities (deprecated)
ics security: 2.1.8 - Industrial control systems (ICS) or supervisory control and data acquisition (SCADA) vulnerabilities (deprecated)
iot vulnerability: 2.1.9 - IoT-related vulnerabilities
internet of things flaw: 2.1.9 - IoT-related vulnerabilities
iot exploit: 2.1.9 - IoT-related vulnerabilities
smart device vulnerability: 2.1.9 - IoT-related vulnerabilities
iot security: 2.1.9 - IoT-related vulnerabilities
exploit development: 2.2 - Exploit development
exploit creation: 2.2 - Exploit development
vulnerability exploitation: 2.2 - Exploit development
exploit coding: 2.2 - Exploit development
exploit engineering: 2.2 - Exploit development
poc exploit: 2.2.1 - Proof-of-concept (PoC) exploit code
proof-of-concept exploit: 2.2.1 - Proof-of-concept (PoC) exploit code
poc code: 2.2.1 - Proof-of-concept (PoC) exploit code
exploit example: 2.2.1 - Proof-of-concept (PoC) exploit code
vulnerability poc: 2.2.1 - Proof-of-concept (PoC) exploit code
malicious infrastructure: 3 - Malicious Infrastructure
cyber infrastructure: 3 - Malicious Infrastructure
iaas: 3.1 - Infrastructure-as-a-service (IaaS)
infrastructure-as-a-service: 3.1 - Infrastructure-as-a-service (IaaS)
iaas abuse: 3.1 - Infrastructure-as-a-service (IaaS)
cloud infrastructure: 3.1 - Infrastructure-as-a-service (IaaS)
iaas exploit: 3.1 - Infrastructure-as-a-service (IaaS)

bulletproof hosting: 3.1.1 - Bulletproof hosting (BPH) services
bph service: 3.1.1 - Bulletproof hosting (BPH) services
bph provider: 3.1.1 - Bulletproof hosting (BPH) services
secure hosting: 3.1.1 - Bulletproof hosting (BPH) services
bph abuse: 3.1.1 - Bulletproof hosting (BPH) services
malicious proxy: 3.1.2 - Proxy services
proxy service: 3.1.2 - Proxy services
proxy provider: 3.1.2 - Proxy services
proxy abuse: 3.1.2 - Proxy services
proxy exploit: 3.1.2 - Proxy services
domain registration: 3.1.3 - Domain registration services
domain service: 3.1.3 - Domain registration services
domain abuse: 3.1.3 - Domain registration services
malicious domain: 3.1.3 - Domain registration services
domain exploit: 3.1.3 - Domain registration services
botnet service: 3.1.4 - Botnet services
botnet provider: 3.1.4 - Botnet services
botnet operation: 3.1.4 - Botnet services
botnet management: 3.1.4 - Botnet services
botnet abuse: 3.1.4 - Botnet services
infrastructure abuse: 3.2 - Legitimate infrastructure repurposed for malicious activity
legitimate infrastructure: 3.2 - Legitimate infrastructure repurposed for malicious activity
infrastructure repurpose: 3.2 - Legitimate infrastructure repurposed for malicious activity
infrastructure misuse: 3.2 - Legitimate infrastructure repurposed for malicious activity
malicious repurposing: 3.2 - Legitimate infrastructure repurposed for malicious activity
criminal infrastructure: 3.3 - Dedicated criminal infrastructure
malware hosting: 3.3 - Dedicated criminal infrastructure
dedicated infrastructure: 3.3 - Dedicated criminal infrastructure
cybercriminal infrastructure: 3.3 - Dedicated criminal infrastructure
criminal network: 3.3 - Dedicated criminal infrastructure

curacao impact: 6.2.9.9 - Curacao

Use Case Example

1. A Threat Analyst identifies a collection of reports from a provider that contains news about recent cyber attacks.
2. The Threat Analyst adds the ThreatQ Intel Requirement Mapper Action to a workflow.
3. The Threat Analyst configures the action with the desired parameters, and enables the workflow.
4. The action automatically parses the reports and will create relationships to Intel Requirement objects when keywords are matched.

Outcome:

Using this action, teams will be able to quickly identify reports that are relevant to their organization. This will allow them to focus on the most critical threats and take action to mitigate threats and prevent future attacks.

Known Issues / Limitations

- Due to some platform limitation the keyword user field might not work as expected. Some keywords might not be matched.
- The **Custom Intel Requirement Mapping** user field supports up to 16k characters. Workflows with mapping larger than that should be split into multiple workflows to avoid mapping issues.

Change Log

- Version 1.0.0
 - Initial release
