# Support

This integration is designated as **ThreatQ Supported**.

**Support Email:** support@threatq.com

**Support Web:** <https://support.threatq.com>

**Support Phone:** 703.574.9893

Integrations/apps/add-ons designated as **ThreatQ Supported** are fully supported by ThreatQuotient's Customer Support team.

ThreatQuotient strives to ensure all ThreatQ Supported integrations will work with the current version of ThreatQuotient software at the time of initial publishing. This applies for both Hosted instance and Non-Hosted instance customers.

ThreatQuotient does not provide support or maintenance for integrations, apps, or add-ons published by any party other than ThreatQuotient, including third-party developers.

# Integration Details

ThreatQuotient provides the following details for this integration:

**Current Integration Version** 1.0.5

**Compatible with ThreatQ Versions** >= 4.50.0

**Support Tier** ThreatQ Supported

---

# Introduction

The CrowdStrike Insight EDR CDF for ThreatQ is a bi-directional integration aimed to give analysts the ability to export data collections to CrowdStrike, as well as bring back detection incidents from CrowdStrike.

The integration provides the following feeds:

- **CrowdStrike Insight EDR - IOC Export** - exports indicators of compromise from a ThreatQ Data Collection to the Custom IOC list in CrowdStrike Insight EDR.
- **CrowdStrike Insight EDR - Detections** - brings in aggregated detections, along with their behavioral events and related IOCs, into ThreatQ.
- **Get Detections by IDs (supplemental)** - fetches the full details for a given set of detection IDs.
- **CrowdStrike Insight EDR - Hosts** - feeds brings in aggregated detections into ThreatQ.
- **Get Host by IDs (supplemental)** - fetches the full details for a given host IDs.

The following object types are ingested from the feeds above:

- Assets
- Attack Patterns
- Events
- Incidents
- Indicators
  - Filename
  - File Path
  - Username
  - MD5
  - SHA-256
  - FQDN
  - Filename
  - Registry Key

# Prerequisites

Review and complete the following prerequisites before installing the integration.

## Asset Object

The integration requires the Asset object. The Asset installation files are included with the integration download on the ThreatQ Marketplace. The Asset object must be installed prior to installing the integration.

**⚠️** You do not have to install the Asset object if you are running ThreatQ version 5.10.0 or greater as the object has been seeded as a default system object.

Use the steps provided to install the custom object.

**⚠️** When installing the custom objects, be aware that any in-progress feed runs will be cancelled, and the API will be in maintenance mode.

1. Download the integration zip file from the ThreatQ Marketplace and unzip its contents.
2. SSH into your ThreatQ instance.
3. Navigate to tmp directory:

```
<> cd /tmp/
```

4. Create a new directory:

```
<> mkdir crowdstrike_edr_cdf
```

5. Upload the **asset.json** and **install.sh** script into this new directory.
6. Create a new directory called **images** within the **crowdstrike\_edr\_cdf** directory.

```
<> mkdir images
```

7. Upload the **asset.svg**
8. Navigate to the **/tmp/crowdstrike\_edr\_cdf**.

The directory should resemble the following:

- tmp
  - **crowdstrike\_edr\_cdf**
    - **asset.json**
    - **install.sh**
    - **images**
      - **asset.svg**

9. Run the following command to ensure that you have the proper permissions to install the custom object:

```
<> chmod +x install.sh
```

- Run the following command:

```
<> sudo ./install.sh
```

 You must be in the directory level that houses the install.sh and json files when running this command.

The installation script will automatically put the application into maintenance mode, move the files to their required directories, install the custom object, update permissions, bring the application out of maintenance mode, and restart dynamo.

**Installing Custom Objects - Step 1 of 5 (Entering Maintenance Mode)**

**Application is now in maintenance mode.**

**Installing Custom Objects - Step 2 of 5 (Installing the Asset Custom Object)**

**Installing Custom Objects - Step 3 of 5 (Configuring image for Asset Custom Object)**

**Installing Custom Objects - Step 4 of 5 (Updating Permissions in ThreatQ)**

**Installing Custom Objects - Step 5 of 5 (Exiting Maintenance Mode)**

**Application is now live.**

-

- Remove the temporary directory, after the custom object has been installed, as the files are no longer needed:

```
<> rm -rf crowdstrike_edr_cdf
```

# Installation

The CDF requires the installation of a custom object before installing the actual CDF if you are on ThreatQ version 5.9.0 or earlier. See the [Prerequisites](#) chapter for more details. The custom object must be installed prior to installing the CDF. Attempting to install the CDF without the custom object will cause the CDF install process to fail.

Perform the following steps to install the integration:

The same steps can be used to upgrade the integration to a new version.

1. Log into <https://marketplace.threatq.com/>.
2. Locate and download the integration file.
3. Navigate to the integrations management page on your ThreatQ instance.
4. Click on the **Add New Integration** button.
5. Upload the integration file using one of the following methods:
  - Drag and drop the file into the dialog box
  - Select **Click to Browse** to locate the integration file on your local machine

ThreatQ will inform you if the feed already exists on the platform and will require user confirmation before proceeding. ThreatQ will also inform you if the new version of the feed contains changes to the user configuration. The new user configurations will overwrite the existing ones for the feed and will require user confirmation before proceeding.

6. If prompted, select the individual feeds to install and click **Install**. The feed will be added to the integrations page.

You will still need to [configure and then enable](#) the feed.

# Configuration

ThreatQuotient does not issue API keys for third-party vendors. Contact the specific vendor to obtain API keys and other integration-related credentials.

To configure the integration:

1. Navigate to your integrations management page in ThreatQ.
2. Select the **Commercial** option from the *Category* dropdown (optional).

If you are installing the integration for the first time, it will be located under the **Disabled** tab.

3. Click on the integration entry to open its details page.
4. Enter the following parameters under the **Configuration** tab:

## All Feeds

| PARAMETER                 | DESCRIPTION  |
|---------------------------|--|
| API Hostname              | Select the appropriate CrowdStrike host. Options include: <ul style="list-style-type: none"><li>◦ US-1: api.crowdstrike.com</li><li>◦ US-2: api.us-2.crowdstrike.com (Default)</li><li>◦ EU-1: api.eu-1.crowdstrike.com</li><li>◦ US-GOV-1: api.laggar.gcw.crowdstrike.com</li></ul> |
| CrowdStrike Client ID     | The CrowdStrike Insight EDR API Client ID to authenticate.   |
| CrowdStrike Client Secret | The CrowdStrike Insight EDR API Client Secret to authenticate.   |

## CrowdStrike Insight EDR - IOC Export | Additional Parameters

| PARAMETER                      | DESCRIPTION   |
|--------------------------------|---|
| <b>Data Collection Hash</b>    | The hash for your ThreatQ Data Collection to export.  |
| <b>Default Source</b>          | The source where this indicator originated. This can be used for tracking where this indicator was defined. The limit 200 characters. |
| <b>Default Expiration Days</b> | The amount of days the indicators should remain active in CrowdStrike Insight EDR. The default setting is 30 days.                    |
| <b>Default Platforms</b>       | The platforms where the indicator originated.   |

## CrowdStrike Insight EDR - Detections | Additional Parameters

| PARAMETER                           | DESCRIPTION   |
|-------------------------------------|---|
| <b>Confidence Threshold (0-100)</b> | The minimum confidence a detection will need to meet to be ingested. The default setting is 0.  |
| <b>Severity Threshold (0-100)</b>   | The minimum severity a detection will need to meet to be ingested. The default setting is 0.  |
| <b>Additional Filters (FQL)</b>     | Enter a FQL query in the field provided to filter the hosts/devices down further.   |
| <b>Ingested Data</b>                | Select the data that will be ingested. Options include: <ul style="list-style-type: none"> <li>◦ Assets</li> <li>◦ Attack Patterns</li> <li>◦ Events</li> <li>◦ Incidents</li> <li>◦ Indicators</li> </ul> At least one option must be selected. All options are selected by default. |

## CrowdStrike Insight EDR - Hosts | Additional Parameter

| PARAMETER | DESCRIPTION |
|-----------|-------------|
|-----------|-------------|

| PARAMETER                       | DESCRIPTION   |
|---------------------------------|---|
| <b>Additional Filters (FQL)</b> | Enter a FQL query in the field provided to filter the hosts/devices down further. |

< CrowdStrike Insight EDR - Detections

**Configuration**

API Hostname: US-2

Disabled  Enabled

[Uninstall](#)

---

**Additional Information**

Integration Type: Feed  
Version: 1.0.2

[Activity Log](#)

CrowdStrike Client ID

Enter your CrowdStrike Insight EDR API Client ID to authenticate

CrowdStrike Client Secret 

Enter your CrowdStrike Insight EDR API Client Secret to authenticate

Confidence Threshold (0 - 100): 0

Enter the minimum confidence a detection will need to meet to be ingested

Severity Threshold (0 - 100): 0

Enter the minimum severity a detection will need to meet to be ingested

Additional Filters (FQL)

If you would like to filter the hosts/devices down further, enter an FQL query here.

**Ingested Data**

Select the data you want to ingest.

Assets  
 Attack Patterns  
 Events  
 Incidents  
 Indicators

5. Review any additional settings, make any changes if needed, and click on **Save**.
6. Click on the toggle switch, located above the *Additional Information* section, to enable it.

# ThreatQ Mapping

ThreatQuotient provides the following mapping for the CrowdStrike Insight EDR CDF.

## CrowdStrike Insight EDR - IOC Export

CrowdStrike Insight EDR - IOC Export will export indicators of compromise from a ThreatQ Data Collection to the Custom IOC list in CrowdStrike Insight EDR.

No data from this feed is ingested back into ThreatQ. The sole purpose is to export indicators to CrowdStrike EDR.

```
POST https://{{HOST}}/iocts/entities/indicators/v1
```

### POST Body

```
[  
  {

```

## CrowdStrike Insight EDR - Detections

CrowdStrike Insight EDR - Detections and Get Detections by IDs (Supplemental) feeds brings in aggregated detections, along with their behavioral events and related IOCs, into ThreatQ.

This feed retrieves the `.resources[]` key which is further on used in the Get Detections by IDs (Supplemental) supplemental feed call in order to fetch the rest of data.

The object will be ingested/linked if the Attack Patterns user_field is checked. |
| .resources[].behaviors[].tactic  | Attack Pattern. Attribute | Tactic                               | .resources[].behaviors[].timestamp | Machine Learning  | The attribute is added only to new attack patterns   |
| .resources[].behaviors[].scenario + '!' + .resources[].behaviors[].description   | Event. Title              | N/A                                  | .resources[].behaviors[].timestamp | Ngav: This file meets the machine learning-based on-sensor AV protection's high confidence threshold for malicious files. | Will be ingested if the Events user_field is checked. The Event Type is Detection  |
| .resources[].behaviors[].description   | Event. Description        | N/A                                  | .resources[].behaviors[].timestamp | This file meets the machine learning-based on-sensor AV protection's high confidence threshold for malicious files.       | N/A  |
| .resources[].behaviors[].display_name  | Event. Attribute          | Behavior                             | .resources[].behaviors[].timestamp | machine learning  | N/A  |
| .resources[].behaviors[].ioc_source  | Event. Attribute          | IOC Source                           | .resources[].behaviors[].timestamp | library_load  | N/A  |
| .resources[].behaviors[].objective   | Event. Attribute          | Behavior Objective                   | .resources[].behaviors[].timestamp | Falcon Detection Method   | N/A  |

## CrowdStrike Detection Type Mapping

The CrowdStrike Detection Type (as found in `.resources[] .behaviors[] .ioc_type` in the Get Detections by IDs Supplemental feed) to ThreatQ Type mapping is as follows:

| CROWDSTRIKE INDICATOR TYPE | THREATQ INDICATOR TYPE |
|----------------------------|------------------------|
| domain                     | FQDN                   |
| filename                   | Filename               |
| hash_md5                   | MD5                    |
| hash_sha256                | SHA-256                |
| registry_key               | Registry Key           |

## CrowdStrike Insight EDR - Hosts

CrowdStrike Insight EDR - Hosts and Get Host by IDs (Supplemental) feeds brings in aggregated detections into ThreatQ.

This feed retrieves the .resources[] key which is further on used in the Get Host by IDs (Supplemental) supplemental feed call in order to fetch the details.

GET <https://HOST/detects/entities/summaries/GET/v1>

## Get Host by IDs (Supplemental)

This supplemental feed fetches the full details for a given host IDs.

```
POST https://{{HOST}}/devices/entities/devices/v2
```

# Average Feed Run

Object counts and Feed runtime are supplied as generalities only - objects returned by a provider can differ based on credential configurations and Feed runtime may vary based on system resources and load.

## CrowdStrike Insight EDR - IOC Export

This run is based on a ThreatQ Data Collection containing ~12k indicators.

| METRIC | RESULT |
|--------|--------|
|--------|--------|

|          |           |
|----------|-----------|
| Run Time | 3 minutes |
|----------|-----------|

## CrowdStrike Insight EDR - Hosts

| METRIC | RESULT |
|--------|--------|

|          |          |
|----------|----------|
| Run Time | 1 minute |
|----------|----------|

|        |   |
|--------|---|
| Assets | 3 |
|--------|---|

|                  |    |
|------------------|----|
| Asset Attributes | 41 |
|------------------|----|

## CrowdStrike Insight EDR - Detections

| METRIC                    | RESULT   |
|---------------------------|----------|
| Run Time                  | 1 minute |
| Assets                    | 1        |
| Asset Attributes          | 9        |
| Attack Patterns           | 4        |
| Attack Pattern Attributes | 3        |
| Events                    | 2        |
| Event Attributes          | 10       |
| Incidents                 | 1        |
| Incident Attributes       | 9        |
| Indicators                | 9        |
| Indicator Attributes      | 14       |

# Known Issues / Limitations

- As of the release of version 1.0.3, Host Groups cannot be customized. All indicators will be applied globally.

# Change Log

- **Version 1.0.5**
  - Updated the **Get Host by IDs** supplemental feed endpoint to v2.
- **Version 1.0.4 rev-a (Guide Update)**
  - Updated the Prerequisites chapter regarding the Asset object. ThreatQ version 5.10.0 introduced the Asset object as a seeded default system object. Users on ThreatQ 5.10.0 or later do not have to install the Asset custom object prior to installing the integration.
- **Version 1.0.4**
  - Added check to **CrowdStrike Insight EDR - IOC Export** in order to verify if indicators already exist in CrowdStrike. Trying to add an existing one will throw an error and will stop any of the indicators from being added.
- **Version 1.0.3**
  - Updated the **CrowdStrike Insight EDR - IOC Export** endpoint's URL and body.
  - Added **Default Platform** configuration parameter.
  - Removed the **Policy Type** configuration parameter.
- **Version 1.0.2 rev-a**
  - Updated Custom Object installation steps in the [Prerequisites](#) chapter.
- **Version 1.0.2**
  - Fixed an issue where custom object files were missing from the integration download. Updated documentation with steps to install the Asset custom object - see the [Prerequisites](#) chapter.
  - Added an Attack Pattern object from Behavior Techniques data in CrowdStrike Insight EDR - Detections Feed.
  - Removed Behavior Technique and Behavior Tactic attributes.
  - Removed the Ingest Behavior Events option from the **CrowdStrike Insight EDR - Detections** feed configuration.
  - Users can now select what data will be ingested in ThreatQ by selecting the appropriate option(s) in **CrowdStrike Insight EDR - Detections** feed configuration.
- **Version 1.0.1**
  - Added a new **API Host** configuration parameter that will allow you to select a CrowdStrike host. See step 4 in the [Configuration](#) chapter for more information.
- **Version 1.0.0**
  - Initial release
