Support

This integration is designated as **ThreatQ Supported**.

Support Email: support@threatq.com

Support Web: <https://support.threatq.com>

Support Phone: 703.574.9893

Integrations/apps/add-ons designated as **ThreatQ Supported** are fully supported by ThreatQuotient's Customer Support team.

ThreatQuotient strives to ensure all ThreatQ Supported integrations will work with the current version of ThreatQuotient software at the time of initial publishing. This applies for both Hosted instance and Non-Hosted instance customers.

ThreatQuotient does not provide support or maintenance for integrations, apps, or add-ons published by any party other than ThreatQuotient, including third-party developers.

Integration Details

ThreatQuotient provides the following details for this integration:

Current Integration Version	1.1.1
Compatible with ThreatQ Versions	>= 4.50.0
Support Tier	ThreatQ Supported

Introduction

The CrowdStrike Insight EDR CDF for ThreatQ gives analysts the ability to ingest detection incidents from CrowdStrike.

The integration provides the following feeds:

- **CrowdStrike Insight EDR - Detections** - brings in aggregated detections, along with their behavioral events and related IOCs, into ThreatQ.
- **Get Detections by IDs (supplemental)** - fetches the full details for a given set of detection IDs.
- **CrowdStrike Insight EDR - Hosts** - feeds brings in aggregated detections into ThreatQ.
- **Get Host by IDs (supplemental)** - fetches the full details for a given host IDs.

The following object types are ingested from the feeds above:

- Assets
- Attack Patterns
- Events
- Incidents
- Indicators
 - Filename
 - File Path
 - IP Address
 - Username
 - MD5
 - SHA-256
 - FQDN
 - Registry Key

Prerequisites

The following is required to install and use the integration:

- CrowdStrike Client ID
- CrowdStrike Client Secret
- [CrowdStrike API Client permissions configured](#)
- [Installation of Asset Custom Object](#) (ThreatQ version < 5.10.0)

CrowdStrike API Client Configuration

Users are required to create a properly scoped API Client within CrowdStrike's platform in order use the operation. API Clients can be created and configured via the **API Clients and Keys** page under **Support**.

The CrowdStrike Insight EDR CDF requires the following scope permission:

- **Hosts** - Read permission required.

Edit API client [Close]

Client name
Insight EDR 14 / 50

Description
0 / 255

Search: hosts

Scope	Read	Write
Hosts	☒	☐

Cancel Update client details

Asset Object

The integration requires the Asset object. The Asset installation files are included with the integration download on the ThreatQ Marketplace. The Asset object must be installed prior to installing the integration.

 You do not have to install the Asset object if you are running ThreatQ version 5.10.0 or greater as the object has been seeded as a default system object.

Use the steps provided to install the custom object.

 When installing the custom objects, be aware that any in-progress feed runs will be cancelled, and the API will be in maintenance mode.

1. Download the integration zip file from the ThreatQ Marketplace and unzip its contents.
2. SSH into your ThreatQ instance.
3. Navigate to tmp directory:

```
cd /tmp/
```

4. Create a new directory:

```
mkdir crowdstrike_edr_cdf
```

5. Upload the **asset.json** and **install.sh** script into this new directory.
6. Create a new directory called **images** within the **crowdstrike_edr_cdf** directory.

```
mkdir images
```

7. Upload the **asset.svg**
8. Navigate to the **/tmp/crowdstrike_edr_cdf**.

The directory should resemble the following:

- tmp
 - crowdstrike_edr_cdf
 - asset.json
 - install.sh
 - images
 - asset.svg

9. Run the following command to ensure that you have the proper permissions to install the custom object:

```
chmod +x install.sh
```

10. Run the following command:

```
sudo ./install.sh
```

You must be in the directory level that houses the `install.sh` and `json` files when running this command.

The installation script will automatically put the application into maintenance mode, move the files to their required directories, install the custom object, update permissions, bring the application out of maintenance mode, and restart dynamo.

```
Installing Custom Objects - Step 1 of 5 (Entering Maintenance Mode)
```

```
Application is now in maintenance mode.
```

```
Installing Custom Objects - Step 2 of 5 (Installing the Asset Custom Object)
```

```
Installing Custom Objects - Step 3 of 5 (Configuring image for Asset Custom Object)
```

```
Installing Custom Objects - Step 4 of 5 (Updating Permissions in ThreatQ)
```

```
Installing Custom Objects - Step 5 of 5 (Exiting Maintenance Mode)
```

```
Application is now live.
```

—

11. Remove the temporary directory, after the custom object has been installed, as the files are no longer needed:

```
rm -rf crowdstrike_edr_cdf
```

Installation

The CDF requires the installation of the Asset custom object before installing the actual CDF if you are on ThreatQ version 5.9.0 or earlier. See the [Prerequisites](#) chapter for more details. The custom object must be installed prior to installing the CDF. Attempting to install the CDF without the custom object will cause the CDF install process to fail.

Perform the following steps to install the integration:

The same steps can be used to upgrade the integration to a new version.

1. Log into <https://marketplace.threatq.com/>.
2. Locate and download the integration zip file.
3. Unzip its contents and install the custom object if you are on ThreatQ version 5.9.0 or earlier.
4. Navigate to the integrations management page on your ThreatQ instance.
5. Click on the **Add New Integration** button.
6. Upload the yaml file using one of the following methods:
 - Drag and drop the file into the dialog box
 - Select **Click to Browse** to locate the integration file on your local machine

ThreatQ will inform you if the feed already exists on the platform and will require user confirmation before proceeding. ThreatQ will also inform you if the new version of the feed contains changes to the user configuration. The new user configurations will overwrite the existing ones for the feed and will require user confirmation before proceeding.

7. If prompted, select the individual feeds to install and click **Install**. The feed will be added to the integrations page.

You will still need to [configure and then enable](#) the feed.

Configuration

ThreatQuotient does not issue API keys for third-party vendors. Contact the specific vendor to obtain API keys and other integration-related credentials.

To configure the integration:

1. Navigate to your integrations management page in ThreatQ.
2. Select the **Commercial** option from the *Category* dropdown (optional).

If you are installing the integration for the first time, it will be located under the **Disabled** tab.

3. Click on the integration entry to open its details page.
4. Enter the following parameters under the **Configuration** tab:

All Feeds

PARAMETER	DESCRIPTION
API Hostname	Select the appropriate CrowdStrike host. Options include: ◦ US-1: <code>api.crowdstrike.com</code> ◦ US-2: <code>api.us-2.crowdstrike.com</code> (Default) ◦ EU-1: <code>api.eu-1.crowdstrike.com</code> ◦ US-GOV-1: <code>api.laggar.gcw.crowdstrike.com</code>
CrowdStrike Client ID	The CrowdStrike Insight EDR API Client ID to authenticate.
CrowdStrike Client Secret	The CrowdStrike Insight EDR API Client Secret to authenticate.

CrowdStrike Insight EDR - Detections | Additional Parameters

PARAMETER	DESCRIPTION
Confidence Threshold (0-100)	The minimum confidence a detection will need to meet to be ingested. The default setting is 0.
Severity Threshold (0-100)	The minimum severity a detection will need to meet to be ingested. The default setting is 0.
Additional Filters (FQL)	Enter a FQL query in the field provided to filter the hosts/ devices down further.
Ingested Data	Select the data that will be ingested. Options include: ◦ Assets ◦ Attack Patterns ◦ Events ◦ Incidents ◦ Indicators At least one option must be selected. All options are selected by default.

CrowdStrike Insight EDR - Hosts | Additional Parameter

PARAMETER	DESCRIPTION
Additional Filters (FQL)	Enter a FQL query in the field provided to filter the hosts/devices down further.

Version: 1.0.2

Configuration

Activity Log

API Hostname

US-2

API Hostname

CrowdStrike Client ID

Enter your CrowdStrike Insight EDR API Client ID to authenticate

CrowdStrike Client Secret

Enter your CrowdStrike Insight EDR API Client Secret to authenticate

Confidence Threshold (0 - 100)

0

Enter the minimum confidence a detection will need to meet to be ingested

Severity Threshold (0 - 100)

0

Enter the minimum severity a detection will need to meet to be ingested

Additional Filters (FQL)

If you would like to filter the hosts/devices down further, enter an FQL query here.

Ingested Data

Select the data you want to ingest.

☒ Assets
 ☒ Attack Patterns
 ☒ Events
 ☒ Incidents
 ☒ Indicators

- Review any additional settings, make any changes if needed, and click on **Save**.
- Click on the toggle switch, located above the *Additional Information* section, to enable it.

ThreatQ Mapping

ThreatQuotient provides the following mapping for the CrowdStrike Insight EDR CDF.

CrowdStrike Insight EDR - Detections

CrowdStrike Insight EDR - Detections and Get Detections by IDs (Supplemental) feeds brings in aggregated detections, along with their behavioral events and related IOCs, into ThreatQ.

This feed retrieves the .resources[] key which is further on used in the Get Detections by IDs (Supplemental) supplemental feed call in order to fetch the rest of data.

GET https://{HOST}/detects/queries/detects/v1

Sample Response

```
{
  "meta": {
    "query_time": 0.016082104,
    "pagination": {
      "offset": 0,
      "limit": 100,
      "total": 3065
    },
    "powered_by": "msa-api",
    "trace_id": "e0f6d630-1558-42d9-86df-d495d9b7e535"

CrowdStrike Detection Type Mapping

The CrowdStrike Detection Type (as found in `.resources[].behaviors[].ioc_type` in the Get Detections by IDs Supplemental feed) to ThreatQ Type mapping is as follows:

CROWDSTRIKE INDICATOR TYPE	THREATQ INDICATOR TYPE
domain	FQDN
filename	Filename
hash_md5	MD5
hash_sha256	SHA-256
registry_key	Registry Key

CrowdStrike Insight EDR - Hosts

CrowdStrike Insight EDR - Hosts and Get Host by IDs (Supplemental) feeds brings in aggregated detections into ThreatQ.

This feed retrieves the `.resources[]` key which is further on used in the `Get Host by IDs (Supplemental)` supplemental feed call in order to fetch the details.

GET `https://{HOST}/detects/entities/summaries/GET/v1`

```

Average Feed Run

Object counts and Feed runtime are supplied as generalities only - objects returned by a provider can differ based on credential configurations and Feed runtime may vary based on system resources and load.

CrowdStrike Insight EDR - Hosts

METRIC	RESULT
Run Time	1 minute
Assets	3
Asset Attributes	41

CrowdStrike Insight EDR - Detections

METRIC	RESULT
Run Time	1 minute
Assets	1
Asset Attributes	9
Attack Patterns	4
Attack Pattern Attributes	3
Events	2
Event Attributes	10
Incidents	1
Incident Attributes	9
Indicators	9
Indicator Attributes	14

Known Issues / Limitations

- As of the release of version 1.0.3, Host Groups cannot be customized. All indicators will be applied globally.

Change Log

- **Version 1.1.1 rev-a**
 - Guide Update - added a section, CrowdStrike Client API Configuration, to the Prerequisites section of the guide.
- **Version 1.1.1**
 - Removed the **CrowdStrike Insight EDR - IOC Export** feed as it has now been incorporated into the **CrowdStrike Insight EDR Action Bundle** integration.
- **Version 1.1.0**
 - CrowdStrike Insight EDR - IOC Export - Added the following new configuration options:
 - Policy for MD5, SHA256 Indicators
 - Policy for Domain, ipv4, ipv6 Indicators
- **Version 1.0.5**
 - Updated the **Get Host by IDs** supplemental feed endpoint to v2.
- **Version 1.0.4 rev-a (Guide Update)**
 - Updated the Prerequisites chapter regarding the Asset object. ThreatQ version 5.10.0 introduced the Asset object as a seeded default system object. Users on ThreatQ 5.10.0 or later do not have to install the Asset custom object prior to installing the integration.
- **Version 1.0.4**
 - Added check to CrowdStrike Insight EDR - IOC Export in order to verify if indicators already exist in CrowdStrike. Trying to add an existing one will throw an error and will stop any of the indicators from being added.
- **Version 1.0.3**
 - Updated the **CrowdStrike Insight EDR - IOC Export** endpoint's URL and body.
 - Added **Default Platform** configuration parameter.
 - Removed the **Policy Type** configuration parameter.
- **Version 1.0.2 rev-a**
 - Updated Custom Object installation steps in the [Prerequisites](#) chapter.
- **Version 1.0.2**
 - Fixed an issue where custom object files were missing from the integration download. Updated documentation with steps to install the Asset custom object - see the [Prerequisites](#) chapter.
 - Added an Attack Pattern object from Behavior Techniques data in CrowdStrike Insight EDR - Detections Feed.
 - Removed Behavior Technique and Behavior Tactic attributes.
 - Removed the **Ingest Behavior Events** option from the **CrowdStrike Insight EDR - Detections** feed configuration.
 - Users can now select what data will be ingested in ThreatQ by selecting the appropriate option(s) in **CrowdStrike Insight EDR - Detections** feed configuration.
- **Version 1.0.1**
 - Added a new **API Host** configuration parameter that will allow you to select a CrowdStrike host. See step 4 in the [Configuration](#) chapter for more information.
- **Version 1.0.0**
 - Initial release
