# Support

This integration is designated as **ThreatQ Supported**.

**Support Email:** support@threatq.com

**Support Web:** <https://support.threatq.com>

**Support Phone:** 703.574.9893

Integrations/apps/add-ons designated as **ThreatQ Supported** are fully supported by ThreatQuotient's Customer Support team.

ThreatQuotient strives to ensure all ThreatQ Supported integrations will work with the current version of ThreatQuotient software at the time of initial publishing. This applies for both Hosted instance and Non-Hosted instance customers.

ThreatQuotient does not provide support or maintenance for integrations, apps, or add-ons published by any party other than ThreatQuotient, including third-party developers.

# Integration Details

ThreatQuotient provides the following details for this integration:

**Current Integration Version**      3.3.5

**Compatible with ThreatQ  
Versions**      >= 5.12.0

**Support Tier**      ThreatQ Supported

# Introduction

The Flashpoint Ignite CDF delivers actionable threat intelligence in the form of compromised Adversaries, Attack Patterns, Compromised Cards, Events, Indicators, Malware, Reports and Vulnerabilities.

The integration ingests threat intelligence data from the following feeds:

- **Flashpoint Ignite** - ingests compromised Reports and any related Events, Indicators, Adversaries, Malware, Vulnerabilities and Attack Patterns.
- **Flashpoint Ignite Community Ransomware** - requests article and conversation data gathered by Flashpoint Ignite regarding Ransomware.
- **Flashpoint Ignite Events** - ingests related Events.
- **Flashpoint Ignite Related Events (Supplemental)** - called once per each `.data[] .id` returned by the Flashpoint feed.
- **Flashpoint Ignite Media Sources** - ingests media data that has been analyzed by Flashpoint Ignite Optical Character Recognition (OCR) process.
- **Flashpoint Ignite Fraud Mitigation** - ingests compromised credit cards from illicit communities and data breaches.

The integration ingests the following system object types:

- Adversaries
  - Adversary Attributes
- Attack Patterns
- Compromised Card (custom object)
- Events
  - Event Attributes
- Indicators
  - Indicator Attributes
- Malware
- Reports
- Vulnerabilities

# Prerequisites

The Flashpoint Ignite CFD requires the following:

- Flashpoint Ignite API Key.
- Compromised Card custom object.

## Compromised Card Custom Object

The integration requires the Compromised Card custom object.

Use the steps provided to install the custom object.

When installing the custom objects, be aware that any in-progress feed runs will be cancelled, and the API will be in maintenance mode.

### ThreatQ V6 Steps

Use the following steps to install the custom object in ThreatQ v6:

1. Download the integration bundle from the ThreatQ Marketplace.
2. Unzip the bundle and locate the custom object files.

The custom object files will typically consist of a JSON definition file, install.sh script, and a images folder containing the svg icons.

3. SSH into your ThreatQ instance.

4. Navigate to the following location:

```
cd /var/lib/threatq/misc/
```

5. Upload the custom object files, including the images folder.

The directory structure should be as the following:

- misc
  - install.sh
  - <custom\_object\_name>.json
  - images (directory)
    - <custom\_object\_name>.svg

6. Run the following command:

```
kubectl exec -it deployment/api-schedule-run -n threatq -- sh /var/lib/threatq/misc/install.sh /var/lib/threatq/misc
```

The installation script will automatically put the application into maintenance mode, move the files to their required directories, install the custom object, update permissions, bring the application out of maintenance mode, and restart dynamo.

7. Delete the install.sh, definition json file, and images directory from the misc directory after the object has been installed as these files are no longer needed.

## ThreatQ v5 Steps

Use the following steps to install the custom objects in ThreatQ v5:

1. Download the integration zip file from the ThreatQ Marketplace and unzip its contents.
2. SSH into your ThreatQ instance.
3. Navigate to tmp directory:

```
cd /tmp/
```

4. Create a new directory:

```
mkdir ignite_cdf
```

5. Upload the **compromised\_card.json** and **install.sh** script into this new directory.
6. Create a new directory called **images** within the **ignite\_cdf** directory.

```
mkdir images
```

7. Upload the **compromised\_card.svg**.
8. Navigate to the **/tmp/ignite\_cdf**.

The directory should resemble the following:

- tmp
  - ignite\_cdf
    - compromised\_card.json
    - install.sh
    - images
      - compromised\_card.svg

- 
9. Run the following command to ensure that you have the proper permissions to install the custom object:

```
chmod +x install.sh
```

10. Run the following command:

```
sudo ./install.sh
```

You must be in the directory level that houses the install.sh and json files when running this command.

The installation script will automatically put the application into maintenance mode, move the files to their required directories, install the custom object, update permissions, bring the application out of maintenance mode, and restart dynamo.

11. Remove the temporary directory, after the custom object has been installed, as the files are no longer needed:

```
rm -rf ignite_cdf
```

# Installation

The CDF requires the installation of the Compromised Card custom object before installing the actual CDF. See the [Prerequisites](#) chapter for more details. The custom object must be installed prior to installing the CDF. Attempting to install the CDF without the custom object will cause the CDF install process to fail.

Perform the following steps to install the integration:

The same steps can be used to upgrade the integration to a new version.

1. Log into <https://marketplace.threatq.com/>.
2. Locate and download the integration zip file.
3. Extract the contents of the zip and install the required Compromised Card custom object.
4. Navigate to the integrations management page on your ThreatQ instance.
5. Click on the **Add New Integration** button.
6. Upload the integration yaml file using one of the following methods:
  - Drag and drop the file into the dialog box
  - Select **Click to Browse** to locate the integration on your local machine
7. Select the individual feeds to install, when prompted, and click **Install**.

ThreatQ will inform you if the feed already exists on the platform and will require user confirmation before proceeding. ThreatQ will also inform you if the new version of the feed contains changes to the user configuration. The new user configurations will overwrite the existing ones for the feed and will require user confirmation before proceeding.

8. The feed(s) will be added to the integrations page. You will still need to [configure and then enable](#) the feed.

# Configuration

ThreatQuotient does not issue API keys for third-party vendors. Contact the specific vendor to obtain API keys and other integration-related credentials.

To configure the integration:

1. Navigate to your integrations management page in ThreatQ.
2. Select the **Commercial** option from the *Category* dropdown (optional).

If you are installing the integration for the first time, it will be located under the **Disabled** tab.

3. Click on the integration entry to open its details page.
4. Enter the following parameters under the **Configuration** tab:

## Flashpoint Ignite Parameters

PARAMETER	DESCRIPTION
API Key	Your Flashpoint API Key.
Parse for Selected Indicators	Select the types of indicators to parse out of the report body. Options include: <ul style="list-style-type: none"><li>◦ CVEs</li><li>◦ MD5 Hashes</li><li>◦ SHA-1 Hashes</li><li>◦ SHA-256 Hashes</li><li>◦ SHA-512 Hashes</li><li>◦ IP Addresses</li></ul>
Save Actor Profile As	Determines whether a Report containing a Tag with an 'Actor Profile' value should be ingested as an Adversary or as an Intrusion Set.
Enable SSL Verification	When checked, validates the host-provided SSL certificate. This option is enabled by default.

PARAMETER	DESCRIPTION
<b>Disable Proxies</b> 	Enable this option if the feed should not honor proxies set in the ThreatQ UI.

# Flashpoint Ignite Community Ransomware Parameters

PARAMETER	DESCRIPTION
API Key	Your Flashpoint API Key.
Related IoCs Filter	Select the IoCs to ingest into the ThreatQ platform. Options include: <ul style="list-style-type: none"> <li>◦ Email Address</li> <li>◦ IP Address</li> <li>◦ FQDN</li> </ul>
Append Translation to the Description	If a translation is available, it will be added to the description.
Search Query	Optional - This query allows you to specify additional keywords that the returned result must contain.
Enable SSL Verification	When checked, validates the host-provided SSL certificate. This option is enabled by default.
Disable Proxies	Enable this option if the feed should not honor proxies set in the ThreatQ UI.

Integration Type: Feed

Version:

[Activity Log](#)

**Overview**

This feed is designed to ingest data from Flashpoint's Card Fraud Mitigation service. More specifically, it will ingest compromised credit cards for the BINs that your organization is monitoring. This will not ingest all compromised credit cards that Flashpoint knows about.

This feed also requires the Compromised Card custom object to be installed into your ThreatQ instance. Please contact the ThreatQ Support team to have it installed.

---

**Authentication**

API Key

Enter your Flashpoint API Key with access to the Card Fraud Mitigation service.

---

**Filtering Options**

BIN Filter (Optional)

Enter the BINs that you want to ingest compromised credit cards for. BINs should be entered one per line. If you leave this field blank, all compromised credit cards will be ingested.

---

**Ingest Options**

**Context Filter**

Select which pieces of context you want to bring into ThreatQ with each compromised card.

Account Number

BIN

CVV

Last 4 Digits

5. Review any additional settings, make any changes if needed, and click on **Save**.
6. Click on the toggle switch, located above the *Additional Information* section, to enable it.

# ThreatQ Mapping

## Flashpoint Ignite

The Flashpoint Ignite feed ingests compromised Reports and any related Events, Indicators, Adversaries, Malware, Vulnerabilities and Attack Patterns.

In order to fetch related events, `.data[].sources[].original` is used as the `<event_id>` parameter for the Related Events endpoint. The `<event_id>` is extracted from the URL (e.g., in `https://api.flashpoint.io/technical-intelligence/v1/event/5e7a40ba-e198-4e44-90f5-007b0a212811`, the `<event_id>` will be equal to `5e7a40ba-e198-4e44-90f5-007b0a212811`).

```
GET https://api.flashpoint.io/finished-intelligence/v1/reports
```

# Flashpoint Ignite Events and Related Events

The Flashpoint Ignite Events feed and Related Events Supplemental feed use the same endpoint and share the same mapping.

## Flashpoint Ignite Events

```
GET https://api.flashpoint.io/technical-intelligence/v1/event
```

## Flashpoint Ignite Related Events

The Flashpoint Related Events Supplemental feed is called once per each `.data[].id` returned by the Flashpoint feed.

```
GET https://api.flashpoint.io/technical-intelligence/v1/event/event_id
```

# Flashpoint Ignite Media Sources

The Flashpoint Ignite Media Sources feed ingests media data that has been analyzed by Flashpoint Ignite Optical Character Recognition (OCR) process. The OCR process returns any text, classifications, or logos found within the media that are available for search. The output of the OCR process is ingested as a ThreatQ Report.

ThreatQuotient provides the following default mapping for this feed:

FEED DATA PATH	THREATQ ENTITY	THREATQ OBJECT TYPE OR ATTRIBUTE KEY	PUBLISHED DATE	EXAMPLES	NOTES
.items[].card.number	Card.Value	N/A	.items[].date	47088103113 02243	If items[].card.number is available
.items[].bin, .items[].last4, items[].card.expiration, items[].card.csv	Card.Value	N/A	.items[].date	517800\  26\ 01	If items[].card.number is not available
.items[].account_number	Card.Attribute	Account Number	.items[].date	031130224	User-configurable
.items[].bin	Card.Attribute	BIN	.items[].date	470881	User-configurable
.items[].card.csv	Card.Attribute	CVV	.items[].date	614	User-configurable
.items[].last4	Card.Attribute	Last 4 Digits	.items[].date	2243	User-configurable
.items[].site	Card.Attribute	Site	.items[].date	Telegram	User-configurable
.items[].release.name	Card.Attribute	Release Name	.items[].date	March, 2024	User-configurable
.items[].prices[]	Card.Attribute	Sale Price	.items[].date	24	User-configurable
.items[].source_type	Card.Attribute	Source Type	.items[].date	chat	User-configurable
.items[].author	Card.Attribute	Source	.items[].date	CC CHEAPLUXURY SCRAPE	User-configurable
.items[].type	Card.Attribute	Data Type	.items[].date	full_card	User-configurable
.items[].last_observed_at	Card.Attribute	Last Observed At	.items[].date	2024-07-11 05:24:47.29 7485	Timestamp, User-configurable, Updatable
.items[].first_observed_at	Card.Attribute	First Observed At	.items[].date	2024-07-11 05:24:47.29 7485	Timestamp, User-configurable
.items[].card.expiration	Card.Attribute	Expiration	.items[].date	08/2024	User-configurable
.items[].cardholder.name.first	Card.Attribute	Owner First Name	.items[].date	N/A	User-configurable
.items[].cardholder.name.full_name	Card.Attribute	Owner Full Name	.items[].date	N/A	User-configurable
.items[].cardholder.location.city	Card.Attribute	Owner City	.items[].date	LIVERMORE	User-configurable
.items[].cardholder.location.region	Card.Attribute	Owner Region	.items[].date	CA	User-configurable
.items[].cardholder.location.country	Card.Attribute	Owner Country	.items[].date	US	User-configurable
.items[].cardholder.location.zip_code	Card.Attribute	Owner Zip code	.items[].date	94550	User-configurable
.items[].site_source_uri	Card.Attribute	Flashpoint Link	.items[].date	web.telegram.org	User-configurable

# Average Feed Run

Object counts and Feed runtime are supplied as generalities only - objects returned by a provider can differ based on credential configurations and Feed runtime may vary based on system resources and load.

## Flashpoint Ignite

METRIC	RESULT
Run Time	4 minutes
Reports	71
Report Attributes	1,413
Adversaries	1
Adversary Attributes	0
Events	15
Event Attributes	290
Indicators	1,101
Indicator Attributes	27,453
Malware	16
Attack Patterns	0
Vulnerabilities	0

## Flashpoint Ignite Community Ransomware

METRIC	RESULT
Run Time	8 minutes
Adversaries	46
Reports	856
Report Attributes	1,980
Indicators	3,921

## Flashpoint Ignite Events, Related Events

METRIC	RESULT
Run Time	120 minutes
Events	107
Event Attributes	868
Indicators	42,759
Indicator Attributes	334,244
Malware	28
Attack Patterns	28
Adversaries	0

METRIC	RESULT
Vulnerabilities	0

## Flashpoint Ignite Media Sources

METRIC	RESULT
Run Time	2 minutes
Adversaries	818
Reports	647
Report Attributes	2,394

## Flashpoint Ignite Card Fraud Mitigation

METRIC	RESULT
Run Time	8 minutes
Compromised Cards	4,571
Card Attributes	51,599

# Known Issues / Limitations

- MITRE ATT&CK attack patterns must have already been ingested by a previous run of the MITRE ATT&CK feeds in order for MITRE ATT&CK attack patterns to be extracted and related. MITRE ATT&CK attack patterns are ingested from the following feeds:
  - MITRE Enterprise ATT&CK
  - MITRE Mobile ATT&CK
  - MITRE PRE-ATT&CK
- The API used by Flashpoint Ignite Media Sources only returns the latest 10000 records.

# Change Log

- **Version 3.3.5**
  - Added a new configuration parameter, **Content Filter**, to the **Flashpoint Ignite Media Sources** feed. This parameter allows you to select the pieces of enriched data to ingest.
  - The **Flashpoint Ignite Media Sources** feed now ingests Authors as adversaries. Authors were previously ingested as identities.
- **Version 3.3.4**
  - Resolved a pagination issue with the Flashpoint Ignite Media Sources feed.
- **Version 3.3.3**
  - Resolved an issue where descriptions were truncated which resulted in elements such as tables and images being removed. Descriptions will no longer be truncated and table and image elements will now be included.
  - Threat Actors are now mapped as Adversaries instead of Identity objects.
- **Version 3.3.2**
  - Added a new feed: **Flashpoint Ignite Card Fraud Mitigation**. This new feed ingests compromised card objects and requires the Compromised Card custom object.
  - Added the following parameters to all feeds:
    - Disable Proxies
    - Enable SSL Verification
- **Version 3.3.1**
  - Added a new feed: **Flashpoint Ignite Community Ransomware**.
- **Version 3.3.0**
  - Migrated the feeds to the Flashpoint Ignite API.
  - Added new feed: **Flashpoint Ignite Media Sources**.
  - Added a new Known Issue - the API used by Flashpoint Ignite Media Sources only returns the latest 10000 records.
  - Updated minimum ThreatQ version to 5.12.0
  - Updated integration name from **Flashpoint CDF** to **Flashpoint Ignite CDF**.
- **Version 3.2.0**
  - Fixed a pagination issue.
  - Updated maximum number of skipped items to 10,000.
  - Added IOC Type filtering support for Flashpoint Events. See the [Configuration](#) chapter for more details.
- **Version 3.1.0**
  - Fixed an issue with blank descriptions.
  - Added indicator parsing for the report body (hashes, CVEs, and IPs). See the [ThreatQ Mapping](#) and [Configuration](#) chapters for further details.
  - Tags are now ingested as Tags within ThreatQ. Previously, these tags were ingested as attributes into the ThreatQ platform.
- **Version 3.0.1**
  - Fixes KeyError for Attribute
- **Version 3.0.0**
  - Mapping Changed

- CDF Rewritten
- Removed the Ingest Related Reports user field
- **Version 2.1.0**
  - Ingest data as Adversaries or Intrusion Set
  - Add the Ingest Related Reports user field
  - Removed the attribute 'Notified At'
  - Add published\_at to Reports and Report Attributes
    - Filter the <div> and <img> from the .body JSON key
- **Version 2.0.2**
  - Header Enhancements
- **Version 2.0.1**
  - Fix the error with the JSON Parsing
- **Version 2.0.0**
  - Ingest IPs from new endpoint
- **Version 1.0.0**
  - Initial release
