# Support

This integration is designated as **ThreatQ Supported**.

**Support Email:** support@threatq.com

**Support Web:** <https://support.threatq.com>

**Support Phone:** 703.574.9893

Integrations/apps/add-ons designated as **ThreatQ Supported** are fully supported by ThreatQuotient's Customer Support team.

ThreatQuotient strives to ensure all ThreatQ Supported integrations will work with the current version of ThreatQuotient software at the time of initial publishing. This applies for both Hosted instance and Non-Hosted instance customers.

ThreatQuotient does not provide support or maintenance for integrations, apps, or add-ons published by any party other than ThreatQuotient, including third-party developers.

# Integration Details

ThreatQuotient provides the following details for this integration:

**Current Integration Version** 1.0.1

**Compatible with ThreatQ Versions** >= 6.5.0

**Support Tier** ThreatQ Supported

# Introduction

The NCFTA CDF integration ingests published MISP events from a user-provided, self-hosted MISP server instance. The MISP threat sharing platform is free and open source software that enables sharing of threat intelligence represented in the MISP data model format.

The integration ingests data from the following endpoint:

- POST {{user\_fields.domain\_name}}/events/restSearch.

{{user\_fields.domain\_name}} must contain the protocol, such as <https://>.

The integration ingests the following system objects:

- Events
- Indicators
- Attachments
- Signatures
- Adversaries
- Attack Patterns
- Course of actions
- Intrusion Sets
- Malware
- Tools
- Attack Patterns

---

# Prerequisites

If you intend to ingest MISP events that are related to any MITRE MISP galaxies, confirm that the following feeds successfully run prior to running the MISP Import feed:

- MITRE Enterprise ATT&CK
- MITRE Mobile ATT&CK
- MITRE PRE-ATT&CK

# Installation

Perform the following steps to install the integration:

The same steps can be used to upgrade the integration to a new version.

1. Log into <https://marketplace.threatq.com/>.
2. Locate and download the integration yaml file.
3. Navigate to the integrations management page on your ThreatQ instance.
4. Click on the **Add New Integration** button.
5. Upload the integration yaml file using one of the following methods:
  - Drag and drop the file into the dialog box
  - Select **Click to Browse** to locate the file on your local machine

ThreatQ will inform you if the feed already exists on the platform and will require user confirmation before proceeding. ThreatQ will also inform you if the new version of the feed contains changes to the user configuration. The new user configurations will overwrite the existing ones for the feed and will require user confirmation before proceeding.

6. If prompted, select the individual feeds to install and click **Install**. The feed will be added to the integrations page.

You will still need to [configure and then enable](#) the feed.

# Configuration

ThreatQuotient does not issue API keys for third-party vendors. Contact the specific vendor to obtain API keys and other integration-related credentials.

To configure the integration:

1. Navigate to your integrations management page in ThreatQ.
2. Select the **OSINT** option from the *Category* dropdown (optional).

If you are installing the integration for the first time, it will be located under the **Disabled** tab.

3. Click on the integration entry to open its details page.
4. Enter the following parameters under the **Configuration** tab:

| PARAMETER                           | DESCRIPTION   |
|-------------------------------------|---|
| <b>MISP Domain Name</b>             | The MISP server instance domain name (or IP address) preceded by the protocol it uses, such as <code>https://my-misp-server.org</code> . The provided domain name or IP address must be reachable from the ThreatQ instance.  |
| <b>API Key</b>                      | The MISP account API key.   |
| <b>Query Filter Characteristics</b> | Set which parameters that decide which events to retrieve at run-time. Options include: <ul style="list-style-type: none"><li>◦ <b>Modified Events</b> - ingest contents of any modified event since the last run.</li><li>◦ <b>New Events</b> - ingest events having a newer date than configured start date together with their full context.</li></ul> |
| <b>Sharing Group Filter</b>         | Enter a line-separated list of sharing group names (or IDs) to filter events by.<br><br> Only selected sharing group events will be ingested.  |
| <b>Disable Proxies</b>              | If True, specifies that this feed should not honor any proxies setup in ThreatQuotient.   |

| PARAMETER                      | DESCRIPTION   |
|--------------------------------|---|
|                                | This parameter is disabled by default.  |
| <b>Enable SSL Verification</b> | If True, specifies that this feed should verify SSL connections with the provider.<br><br>This parameter is enabled by default. |

5. Review any additional settings, make any changes if needed, and click on **Save**.
6. Click on the toggle switch, located above the *Additional Information* section, to enable it.

# ThreatQ Mapping

## NCFTA

The NCFTA feed ingests MISP events into the ThreatQ platform.

```
POST {{user_fields.domain_name}}/events/restSearch
```

## Threat Level Mapping

| MISP THREAT LEVEL ID | THREATQ ATTRIBUTE VALUE |
|----------------------|-------------------------|
| 1                    | High                    |
| 2                    | Medium                  |
| 3                    | Low                     |
| 4                    | Undefined               |

## Distribution Mapping

| MISP DISTRIBUTION ID | THREATQ ATTRIBUTE VALUE |
|----------------------|-------------------------|
| 0                    | Your organization only  |
| 1                    | This community only     |
| 2                    | Connected communities   |
| 3                    | All communities         |
| 4                    | Sharing Group           |

## Attribute Distribution Mapping

| MISP ATTRIBUTE DISTRIBUTION ID | THREATQ ATTRIBUTE VALUE |
|--------------------------------|-------------------------|
| 0                              | Your organization only  |
| 1                              | This community only     |
| 2                              | Connected communities   |
| 3                              | All communities         |
| 4                              | Sharing Group           |
| 5                              | Inherit event           |

## Analysis Mapping

| MISP ANALYSIS ID | THREATQ ATTRIBUTE VALUE |
|------------------|-------------------------|
| 0                | Initial                 |
| 1                | Ongoing                 |
| 2                | Completed               |

## MISP Attribute Type to ThreatQ Indicator Type Mapping

| MISP ATTRIBUTE TYPE | THREATQ INDICATOR TYPE |
|---------------------|------------------------|
| md5                 | MD5                    |
| sha1                | SHA-1                  |
| sha256              | SHA-256                |
| sha384              | SHA-384                |
| sha512              | SHA-512                |
| filename            | Filename               |
| ip                  | IP Address             |
| ip-src              | IP Address             |
| ip-dst              | IP Address             |
| hostname            | FQDN                   |
| domain              | FQDN                   |
| email               | Email Address          |
| email-subject       | Email Subject          |
| email-attachment    | Email Attachment       |
| email-src           | Email Address          |

**MISP ATTRIBUTE TYPE      THREATQ INDICATOR TYPE**

|                |          |
|----------------|----------|
| email-x-mailer | X-Mailer |

| mitre-mobile-attack-attack-pattern     | Attack Pattern   |
| mitre-pre-attack-attack-pattern        | Attack Pattern   |

# Average Feed Run

MISP server instances vary widely in their setup and the data stored within them. Due to this, average feed run results cannot be confidently provided.

# Known Issues / Limitations

- MISP does not verify whether a Snort or YARA rule entered into it is valid. However, the Snort and YARA parsers used by this feed depend on the Snort or YARA rules being well-formed. Please refer to the following non-comprehensive list to aid in making sure that the Snort or YARA rules stored in your MISP server instance are valid so that they can be properly ingested by this feed.
- Snort:
  - Each rule option must be terminated with a semicolon (;).
  - Offending Snort rule: alert tcp \$HOME\_NET any -> \$EXTERNAL\_NET [80,443,8080,7080,21,50000,995] (msg:"BDS MALICIOUS Emotet Worming Traffic Likely";content:"d29ybSBzdGFydGVk";content:"POST";http\_method;classty pe:spreader;sid:7;rev:1)
    - Correction needed: rev:1 should be rev:1;
  - Rule option values must be valid. For instance, options like rev, sid, and gid must have base 10 integers as their value.
  - Offending Snort option: sid:#####;
    - Correction needed: Either remove sid if the value is not known or replace the value with a valid ID, like sid:7;.
  - The value of the snort MISP attribute must contain at least one entire Snort rule. Multiple Snort rules can be provided in a single value if separated by newlines. The value must not contain any excess text, such as a header like Snort rule:.
- YARA:
  - The value of the yara MISP attribute must contain at least one entire YARA rule. Multiple YARA rules can be provided in a single value if separated by newlines. The value must not contain any excess text, such as a header like YARA rule:.
  - Make sure that any text that is not valid YARA syntax is either removed or commented out.

# Change Log

- **Version 1.0.1**
  - Renamed the **Authorization** configuration parameter to **API Key**.
  - Added a new configuration parameter: **Sharing Group Filter**. This parameter allows you to enter a line-separated list of sharing group names (or IDs) to filter events by. Only selected sharing group events will be ingested.
  - Added the ability to ingest email and phone number indicators - see the **MISP Attribute Type to ThreatQ Indicator Type Mapping** table for more information.
  - Improved operation of the **Query Filter Characteristics** filter.
  - Removed the **Save Intrusion Sets** configuration parameter.
  - Updated the minimum ThreatQ version to 6.5.0.
- **Version 1.0.0**
  - Initial release
