Support

This integration is designated as **ThreatQ Supported**.

Support Email: support@threatq.com

Support Web: <https://support.threatq.com>

Support Phone: 703.574.9893

Integrations/apps/add-ons designated as **ThreatQ Supported** are fully supported by ThreatQuotient's Customer Support team.

ThreatQuotient strives to ensure all ThreatQ Supported integrations will work with the current version of ThreatQuotient software at the time of initial publishing. This applies for both Hosted instance and Non-Hosted instance customers.

ThreatQuotient does not provide support or maintenance for integrations, apps, or add-ons published by any party other than ThreatQuotient, including third-party developers.

Integration Details

ThreatQuotient provides the following details for this integration:

Current Integration Version	1.0.0
Compatible with ThreatQ Versions	>= 5.5.0
Support Tier	ThreatQ Supported

Introduction

The Reuters Cybersecurity News CDF integration enables analysts to stay on top of the latest news from the [Reuters Cybersecurity News](#), which delivers reporting on global data breaches, ransomware attacks, and the activities of cybercriminal organizations and nation-state actors. The site's coverage often includes analysis of attack methodologies, the effectiveness of defenses, and the responses from affected entities, governments, and law enforcement. Beyond immediate incident reporting, Reuters also delves into deeper investigations of cybersecurity trends, policy developments, and the challenges faced by businesses and consumers in the evolving threat landscape.

The integration provides the following feed:

- **Reuters Cybersecurity News** - ingests cybersecurity posts from Reuters as reports.

The integration ingests Reports and Report attributes.

Installation

Perform the following steps to install the integration:

The same steps can be used to upgrade the integration to a new version.

1. Log into <https://marketplace.threatq.com/>.
2. Locate and download the integration yaml file.
3. Navigate to the integrations management page on your ThreatQ instance.
4. Click on the **Add New Integration** button.
5. Upload the integration yaml file using one of the following methods:
 - Drag and drop the file into the dialog box
 - Select **Click to Browse** to locate the file on your local machine

ThreatQ will inform you if the feed already exists on the platform and will require user confirmation before proceeding. ThreatQ will also inform you if the new version of the feed contains changes to the user configuration. The new user configurations will overwrite the existing ones for the feed and will require user confirmation before proceeding.

The feed will be added to the integrations page. You will still need to [configure and then enable](#) the feed.

Configuration

ThreatQuotient does not issue API keys for third-party vendors. Contact the specific vendor to obtain API keys and other integration-related credentials.

To configure the integration:

1. Navigate to your integrations management page in ThreatQ.
2. Select the **OSINT** option from the *Category* dropdown (optional).

If you are installing the integration for the first time, it will be located under the **Disabled** tab.

3. Click on the integration entry to open its details page.
4. Enter the following parameters under the **Configuration** tab:

PARAMETER	DESCRIPTION
Enable SSL Certificate Verification	Enable this parameter if the feed should validate the host-provided SSL certificate.
Disable Proxies	Enable this parameter if the feed should not honor proxies set in the ThreatQ UI.

Additional Information

Integration Type: Feed

Version:

Configuration

Activity Log

Overview

Reuters Cybersecurity News provides timely reporting on global cyber threats, data breaches, and regulatory developments affecting businesses and governments. It delivers in-depth analysis and exclusive insights on hacking incidents, nation-state cyber activities, and cybersecurity trends. This integration enables analysts to stay on top of the latest news published by Reuters. This feed periodically pulls posts from Reuters Cybersecurity News and ingests them into ThreatQ as Report objects.

Request Options

☒ Enable SSL Certificate Verification

When checked, validates the host-provided SSL certificate. Checked by default.

☐ Disable Proxies

If true, specifies that this feed should not honor any proxies setup in ThreatQuotient.

Set indicator status to...

Review

Run Frequency

Every 24 Hours

Next scheduled run:
05/13/2025 06:32am

☒ Send a notification when this feed encounters issues.

☒ Debug Option: Save the raw data response files.

We recommend leaving this disabled unless actively troubleshooting an issue because it utilizes a lot of disk space.

Save

5. Review any additional settings, make any changes if needed, and click on **Save**.
6. Click on the toggle switch, located above the *Additional Information* section, to enable it.

ThreatQ Mapping

Reuters Cybersecurity News

The Reuters Cybersecurity News feed periodically pulls posts from Reuters Cybersecurity News and ingests them into ThreatQ as Report objects.

GET <https://www.reuters.com/pf/api/v3/content/fetch/articles-by-section-alias-or-id-v1>

This request returns JSON data, which is then parsed to extract relevant information and the URL Path for the article.

GET <https://www.reuters.com/{{ uri }}>

The mapping for this feed is based on the `.result.articles[]` list from the returned JSON, as well as the information parsed out of the blog's HTML content:

FEED DATA PATH	THREATQ ENTITY	THREATQ OBJECT TYPE OR ATTRIBUTE KEY	PUBLISHED DATE	EXAMPLES	NOTES
<code>.web</code>	Report.Title	N/A	<code>.published_time</code>	FBI says North Korea was responsible for \$1.5 billion ByBit hack	N/A
N/A	Report.Description	N/A	N/A	N/A	Parsed from the HTML
<code>.published_time</code>	Report.Attribute	Published At	N/A	September 05, 2024	N/A
<code>.authors[].name</code>	Report.Attribute	Author	N/A	Reuters	N/A
<code>.ad_topcs[]</code>	Report.Tag	N/A	N/A	crime	N/A

Average Feed Run

Object counts and Feed runtime are supplied as generalities only - objects returned by a provider can differ based on credential configurations and Feed runtime may vary based on system resources and load.

METRIC	RESULT
Run Time	1 minute
Reports	3
Report Attributes	6

Known Issues / Limitations

- The feed utilizes **since** and **until** dates to make sure entries are not re-ingested if they haven't been updated.
- If you need to ingest historical blog posts, run the feed manually by setting the **since** date back.
- If the feed is run multiple times in a specific time window, it will be detected as a bot and be blocked by Reuters. After waiting a few hours, the run should work again and ingest data.
