Support

This integration is designated as **ThreatQ Supported**.

Support Email: tq-support@securonix.com
Support Web: https://ts.securonix.com
Support Phone: 703.574.9893

Integrations/apps/add-ons designated as **ThreatQ Supported** are fully supported by ThreatQuotient's Customer Support team.

ThreatQuotient strives to ensure all ThreatQ Supported integrations will work with the current version of ThreatQuotient software at the time of initial publishing. This applies for both Hosted instance and Non-Hosted instance customers.

> ThreatQuotient does not provide support or maintenance for integrations, apps, or add-ons published by any party other than ThreatQuotient, including third-party developers.

Integration Details

ThreatQuotient provides the following details for this integration:

Current Integration Version	2.0.1
Compatible with ThreatQ Versions	>= 5.5.0
Support Tier	ThreatQ Supported

Introduction

The Securonix OSINT CDF integration is a collection of open-source intelligence, consisting of blog posts and curated tactical indicators, published by Securonix. The integration enables analysts to stay on top of emerging threats and other TTPs used by threat actors based on the latest research from Securonix as well as provide curated intelligence from OSINT sources for infrastructure sweeps.

The integration includes the following feeds:

- **Securonix Blog** - fetches, parses, and ingests posts from Securonix's blog: www.securonix.com/blog.
- **Securonix Autonomous Threat Sweeper IOCs** - fetches curated tactical indicators from Securonix's Autonomous Threat Sweeper GitHub repository.
- **Securonix Connect** - fetches, parses, and ingests Threat Research and Intelligence posts from the Securonix Connect Community page.

The integration ingests the following object types:

- Attack Patterns
- Indicators
- Reports
  - Report Attributes
- Vulnerabilities

Prerequisites

The following is recommended to optimize integration performance:

- Optional - a GitHub API Token (Personal Access Token) to increase the rate limit. This will allow you to pull data from the API without running into rate limits. Authenticated users have a 5000 requests per hour limit.
- MITRE ATT&CK Patterns - attack patterns must have already been ingested by a previous run of the **MITRE ATT&CK CDF** feeds to be correctly related to the attack patterns ingested by the Securonix Blog feed. The feeds within the MITRE ATT&CK CDF include:
  - MITRE Enterprise ATT&CK
  - MITRE Mobile ATT&CK
  - MITRE ICS ATT&CK

Installation

Perform the following steps to install the integration:

> The same steps can be used to upgrade the integration to a new version.

1. Log into https://marketplace.threatq.com/.
2. Locate and download the integration yaml file.
3. Navigate to the integrations management page on your ThreatQ instance.
4. Click on the **Add New Integration** button.
5. Upload the integration yaml file using one of the following methods:
   - Drag and drop the file into the dialog box
   - Select **Click to Browse** to locate the file on your local machine
6. Select the individual feeds to install, when prompted, and click **Install**.

   > ThreatQ will inform you if the feed already exists on the platform and will require user confirmation before proceeding. ThreatQ will also inform you if the new version of the feed contains changes to the user configuration. The new user configurations will overwrite the existing ones for the feed and will require user confirmation before proceeding.

The feed(s) will be added to the integrations page. You will still need to configure and then enable the feed(s).

Configuration

> ThreatQuotient does not issue API keys for third-party vendors. Contact the specific vendor to obtain API keys and other integration-related credentials.

To configure the integration:

1. Navigate to your integrations management page in ThreatQ.
2. Select the **OSINT** option from the *Category* dropdown (optional).

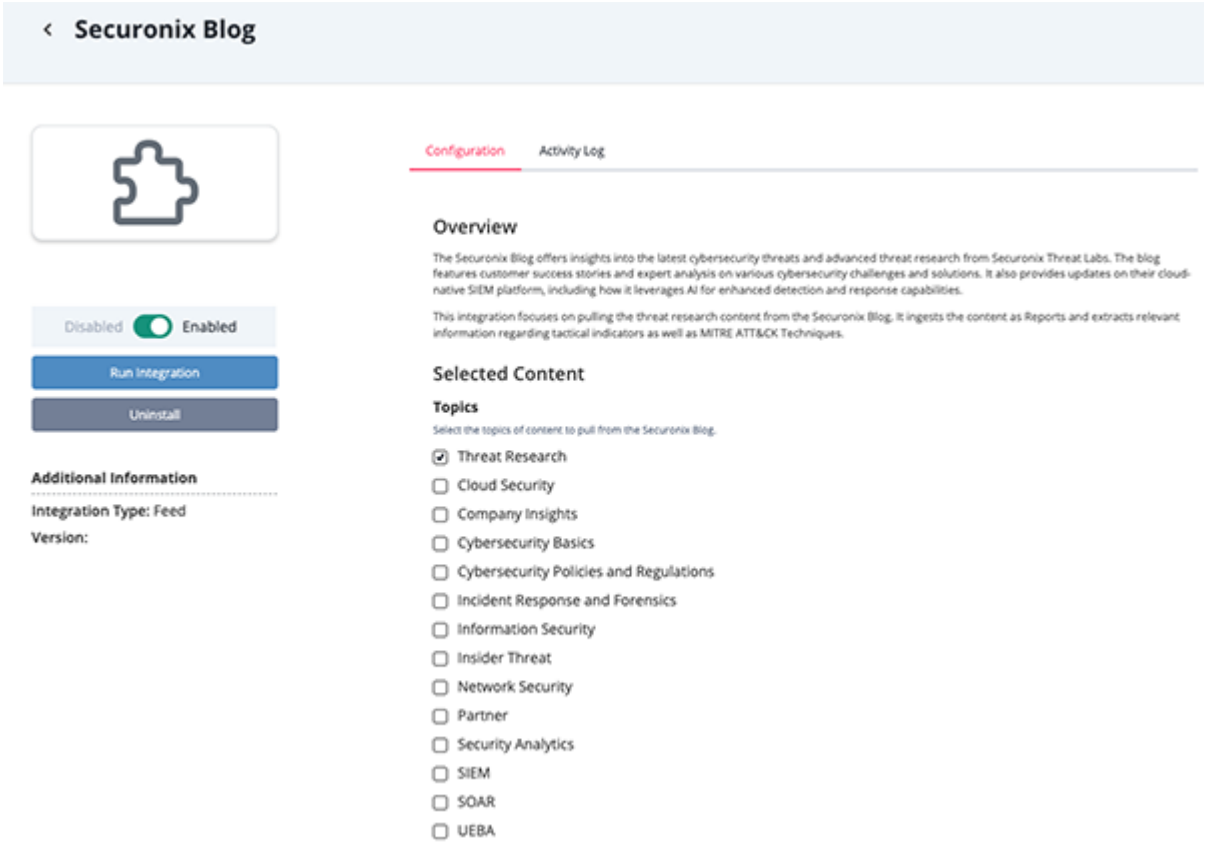
   > If you are installing the integration for the first time, it will be located under the **Disabled** tab.

3. Click on the integration entry to open its details page.
4. Enter the following parameters under the **Configuration** tab:

Securonix Blog Parameters

PARAMETER	DESCRIPTION
Topics	**Topics**: Select the categories of blog posts to pull from The Record. Options include: ◦ Threat Research *(default)* ◦ Cloud Security ◦ Company Insights ◦ Cybersecurity Basics ◦ Cybersecurity Policies and Regulations ◦ Incident Response and Forensics ◦ Information Security ◦ Insider Threat ◦ Network Security ◦ Partner ◦ Security Analytics ◦ SIEM ◦ SOAR ◦ UEBA
Parse for MITRE ATT&CK Techniques	Enable this parameter to parse the content for each post for MITRE ATT&CK Techniques (Attack Patterns). This parameter is enabled by default.

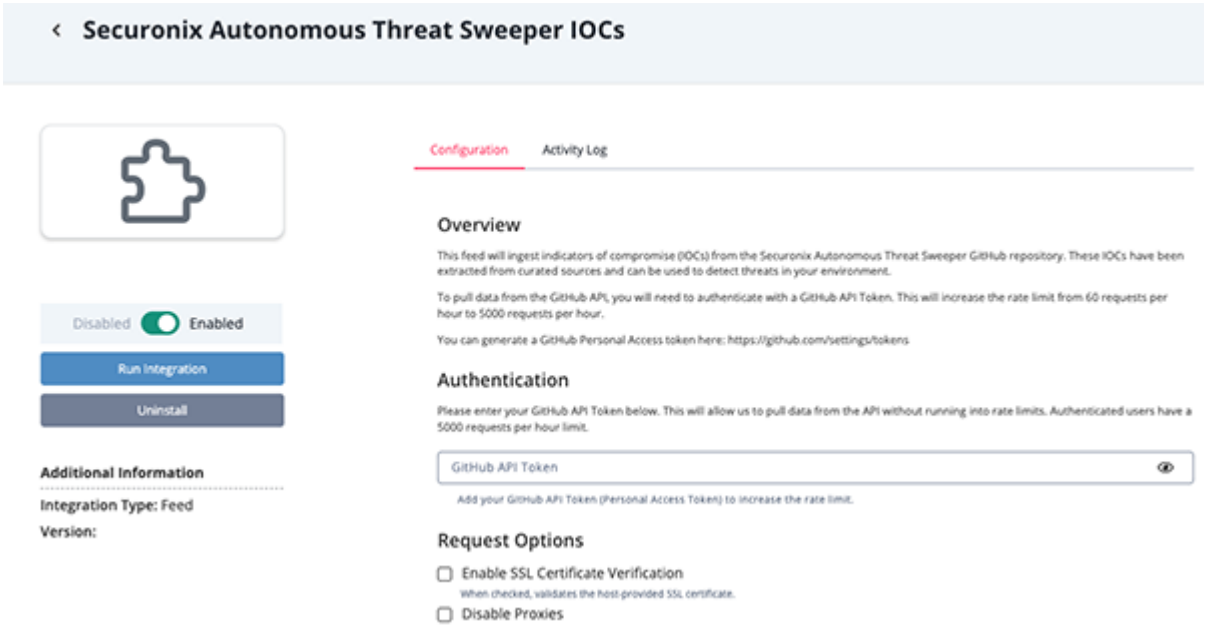
PARAMETER	DESCRIPTION
Parsed IOC Types	Select which IOC types to automatically parse from the content of each post. Options include: ◦ CIDR Blocks ◦ CVEs *(default)* ◦ Email Addresses ◦ Filenames ◦ File Paths ◦ FQDNs ◦ IP Addresses ◦ MD5 *(default)* ◦ SHA-1 *(default)* ◦ SHA-256 *(default)* ◦ SHA-384 ◦ SHA-512 *(default)* ◦ URLs
Ingest CVEs As	Select which entity type to ingest CVE IDs as in ThreatQ. Options include: ◦ Vulnerabilities *(default)* ◦ Indicators (Type: CVE)
Enable SSL Certificate Verification	Enable this parameter if the feed should validate the host-provided SSL certificate.
Disable Proxies	Enable this parameter if the feed should not honor proxies set in the ThreatQ UI.



Securonix Autonomous Threat Sweeper IOCs Parameters

PARAMETER	DESCRIPTION
GitHub API Token	Optional - enter your GitHub API Token (Personal Access Token) to increase the rate limit. This will allow the integration to pull data from the API without running into rate limits. Authenticated users have a 5000 requests per hour limit.
Enable SSL Certificate Verification	Enable this parameter if the feed should validate the host-provided SSL certificate.

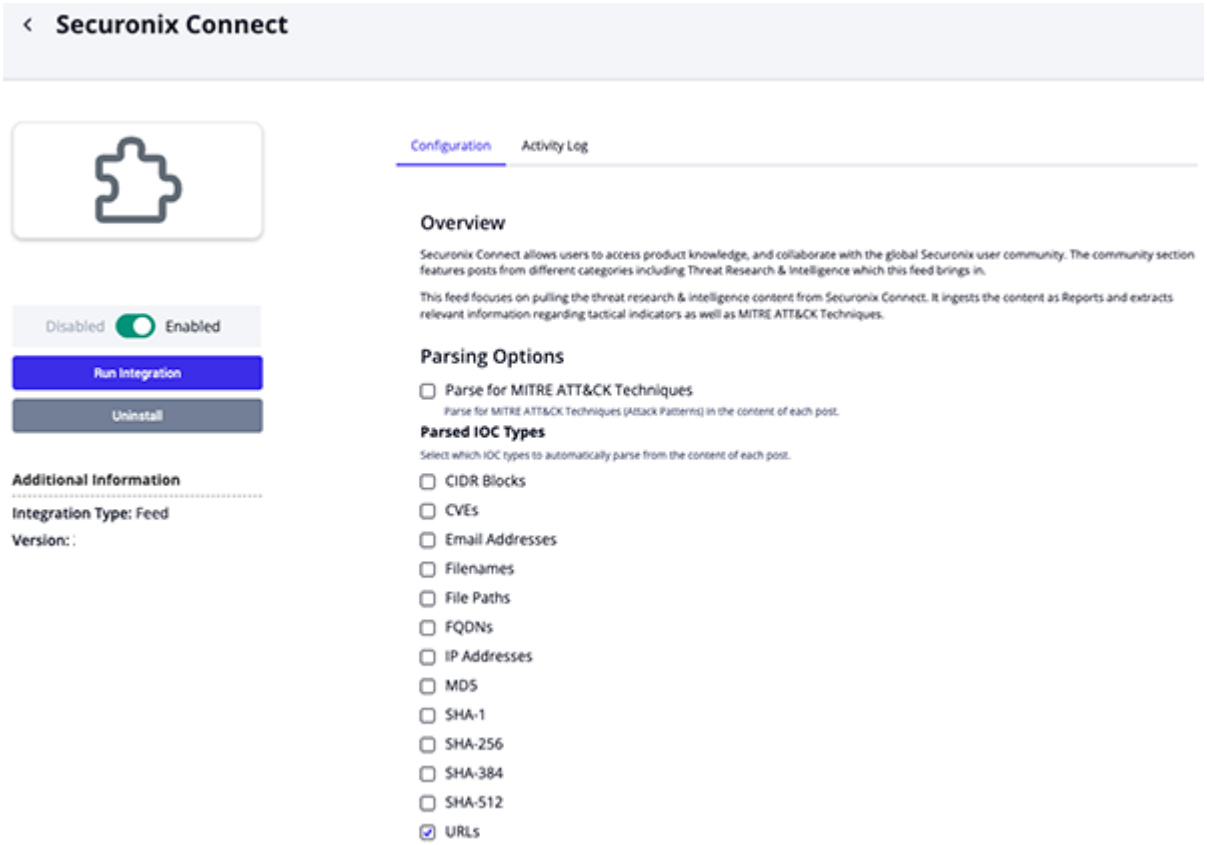
PARAMETER	DESCRIPTION
Disable Proxies	Enable this parameter if the feed should not honor proxies set in the ThreatQ UI.



Securonix Connect Parameters

PARAMETER	DESCRIPTION
Parse for MITRE ATT&CK Techniques	Enable this parameter to parse the content of each blog for MITRE ATTCK Techniques (Attack Patterns).
Parsed IOC Types	Select which IOC types to automatically parse from the content from each blog. Options include: ◦ CIDR Blocks ◦ CVEs *(default)* ◦ Email Addresses ◦ Filenames ◦ File Paths ◦ FQDNs ◦ IP Addresses ◦ MD5 *(default)* ◦ SHA-1 *(default)* ◦ SHA-256 *(default)* ◦ SHA-384 ◦ SHA-512 *(default)* ◦ URLs

PARAMETER	DESCRIPTION
Ingest CVEs As	Select which entity type to ingest CVE IDs as in ThreatQ. Options include: ◦ Vulnerabilities *(default)* ◦ Indicators (Type: CVE)
Enable SSL Certificate Verification	Enable this parameter if the feed should validate the host-provided SSL certificate.
Disable Proxies	Enable this parameter if the feed should not honor proxies set in the ThreatQ UI.



5. Review any additional settings, make any changes if needed, and click on **Save**.
6. Click on the toggle switch, located above the *Additional Information* section, to enable it.

ThreatQ Mapping

Securonix Blog

The Securonix Blog feed pulls posts from Securonix's blog which contains information on the latest threats, vulnerabilities, and security research. You can subscribe to different topics within the blog to filter the content you want to ingest - see the **Topics** configuration parameter for a list of available topics. .

```
GET https://www.securonix.com/blog/
```

This request returns HTML, which is parsed for links to the blog posts. The full blog post content is then fetched.

```
GET https://www.securonix.com/{{ uri }}
```

This request returns HTML, which is parsed for the following fields:

FEED DATA PATH	THREATQ ENTITY	THREATQ OBJECT TYPE OR ATTRIBUTE KEY	PUBLISHED DATE	EXAMPLES	NOTES
N/A	Report.Title	Report	`.published_at`	`Hunting Kerbrute: Analysis, Detection and Mitigation of Kerberos Attacks in Active Directory`	Parsed from the HTML
N/A	Report.Description	N/A	N/A	N/A	Parsed from the HTML
N/A	Report.Attribute	Published At	`.published_at`	`April 5, 2025`	N/A
N/A	Report.Attribute	Category	`.published_at`	`Threat Research`	Parsed from the HTML
N/A	Report.Tags	N/A	N/A	`Threat Research`	Parsed from the HTML
N/A	Related Indicator.Value	Various Types	N/A	N/A	User-configurable. Indicators parsed from HTML content based on user-field selection
N/A	Related Attack-Pattern.Value	Attack Pattern	N/A	`T1087 - <technique name>`	User-configurable. Techniques parsed from HTML content based on user-field selection

Securonix Autonomous Threat Sweeper IOCs

The Securonix Autonomous Threat Sweeper IOCs feed pulls posts from indicators of compromise from Securonix's Autonomous Threat Sweeper GitHub repository. The feed fetches the latest indicators and parses them for various types of IOCs, including, but not limited to, IP addresses, domain names, and file hashes.

```

The `README.md` file contains the IOCs, which are parsed and ingested into ThreatQ using the mapping provided below.

FEED DATA PATH	THREATQ ENTITY	THREATQ OBJECT TYPE OR ATTRIBUTE KEY	PUBLISHED DATE	EXAMPLES	NOTES
N/A	Indicator.Value	MD5, SHA-1, SHA-256, SHA-512, FQDN, IP Address, URL	N/A	N/A	Parsed from the content
N/A	Indicator.Attribute	Threat Summary	`Janela RAT with Chromium Stealer Extension`	N/A	GitHub repository parent path

Securonix Connect

The Securonix Connect feed pulls posts from Securonix's Connect Community page, which contains information on the latest threats, vulnerabilities, and security research.

`GET https://connect.securonix.com/threat-research-intelligence-62`

This request returns HTML, which is parsed for links to the posts. The full post content is then fetched.

```
GET https://connect.securonix.com/threat-research-intelligence-62/{{ uri }}
```

This request returns HTML, which is parsed for the following fields:

FEED DATA PATH	THREATQ ENTITY	THREATQ OBJECT TYPE OR ATTRIBUTE KEY	PUBLISHED DATE	EXAMPLES	NOTES
N/A	Report.Title	Report	`.published_at`	`Securonix Threat Research (STR) Monthly Newsletter – November 2025 Edition –`	Parsed from the HTML
N/A	Report.Description	N/A	N/A	`Welcome back to another newsletter by the Securonix Threat Research Team!`	Parsed from the HTML
N/A	Report.Attribute	Published At	`.published_at`	`December 03, 2025`	N/A
N/A	Report.Attribute	Author	`.published_at`	`Aaron Beardslee`	Parsed from the HTML
N/A	Report.Attribute	External Reference	`.published_at`	`https://connect.securonix.com/threat-research-intelligence-62/{uri}`	Parsed from the HTML
N/A	Related Indicator.Value	Various Types	N/A	`abd73e21cabebdfecfff7294a6f8e4abf9de08cd`	User-configurable. Indicators parsed from HTML content based on user-field selection
N/A	Related Vulnerability.Value	Vulnerability	N/A	`CVE-2025-24893`	User-configurable. Indicators parsed from HTML content based on user-field selection
N/A	Related Attack-Pattern.Value	Attack Pattern	N/A	`T1496`	User-configurable. Techniques parsed from HTML content based on user-field selection

Average Feed Run

Object counts and Feed runtime are supplied as generalities only - objects returned by a provider can differ based on credential configurations and Feed runtime may vary based on system resources and load.

Known Issues / Limitations

- Securonix Blog feed:
  - The feed will fetch, at maximum, the last 3 pages of blog posts.
  - The feed utilizes **since** and **until** dates to make sure entries are not re-ingested if they haven't been updated.
  - Run the feed manually by setting the **since** date back if you need to ingest historical blog posts.

Change Log

- **Version 2.0.1**
  - Improved the parsing logic for attack patterns used by the Securonix Blog feed.
- **Version 2.0.0**
  - Added a new feed: **Securonix Connect.**
- **Version 1.0.1**
  - Added improved error handling.
- **Version 1.0.0**
  - Initial release
