Support

This integration is designated as **ThreatQ Supported**.

Support Email: support@threatq.com

Support Web: <https://support.threatq.com>

Support Phone: 703.574.9893

Integrations/apps/add-ons designated as **ThreatQ Supported** are fully supported by ThreatQuotient's Customer Support team.

ThreatQuotient strives to ensure all ThreatQ Supported integrations will work with the current version of ThreatQuotient software at the time of initial publishing. This applies for both Hosted instance and Non-Hosted instance customers.

ThreatQuotient does not provide support or maintenance for integrations, apps, or add-ons published by any party other than ThreatQuotient, including third-party developers.

Integration Details

ThreatQuotient provides the following details for this integration:

Current Integration Version 1.1.0

Compatible with ThreatQ Versions >= 5.15.0

Support Tier ThreatQ Supported

Introduction

The ThreatQ ACE operation utilizes the ThreatQ ACE library for parsing unstructured text for contextual intelligence such as IOCs, malware, adversaries, and tags.

The operation provides the following action:

- **Parse** - parses a selected object's unstructured description text for contextualization.

The operation is compatible with the following system objects:

- Adversaries
- Assets
- Campaigns
- Events
- Files
- Incidents
- Malware
- Reports
- Custom Objects
 - Cluster
 - Compromised Account
 - Compromised Asset
 - Compromised Card
 - Hunt Mission
 - IMEI
 - Money Mule
 - Malware Analysis
 - Monitoring
 - Organization
 - Persona
 - RFI
 - Suspected Incident
 - Threat Assessment

The custom objects listed above are supported but are not required to install and run the operation. Contact ThreatQ Support if you need these objects.

Installation

The ThreatQ Marketplace download for this operation contains the operation .whl file and custom object files. The custom objects are not required to install the operation. To install the operation, extract the .whl file from the downloaded zip file and proceed with the standard operation installation process.

Perform the following steps to install the integration:

The same steps can be used to upgrade the integration to a new version.

1. Log into <https://marketplace.threatq.com/>.
2. Locate and download the integration file.
3. Navigate to the integrations management page on your ThreatQ instance.
4. Click on the **Add New Integration** button.
5. Upload the integration file using one of the following methods:
 - Drag and drop the file into the dialog box
 - Select **Click to Browse** to locate the integration file on your local machine

ThreatQ will inform you if the operation already exists on the platform and will require user confirmation before proceeding. ThreatQ will also inform you if the new version of the operation contains changes to the user configuration. The new user configurations will overwrite the existing ones for the operation and will require user confirmation before proceeding.

The operation is now installed and will be displayed in the ThreatQ UI. You will still need to [configure](#) and [enable](#) the operation.

Configuration

ThreatQuotient does not issue API keys for third-party vendors. Contact the specific vendor to obtain API keys and other integration-related credentials.

To configure the integration:

1. Navigate to your integrations management page in ThreatQ.
2. Select the **Operation** option from the *Type* dropdown (optional).
3. Click on the integration entry to open its details page.
4. Review any additional settings, make any changes if needed, and click on **Save**.
5. Click on the toggle switch, located above the *Additional Information* section, to enable it.

Actions

The operation provides the following action:

ACTION	DESCRIPTION	OBJECT TYPE	OBJECT SUBTYPE
Parse	Parses the given object for context.	Adversary, Campaign, Incident, Event, File, Malware, Report	N/A

Parse

The Parse action parses the selected object's unstructured description text for contextualization.

Parse Parameters

The Parse action provides the following configuration parameters:

PARAMETER	DESCRIPTION
Dry Run	Disable this option to have the operation automatically upload the parsed context to the ThreatQ platform.
Select Parsers	Select which parsers to use in extract data from the current object. Options include: <ul style="list-style-type: none">• Indicators (default)• Vulnerabilities• Attributes• Tags• Malware• Adversaries• Attack Patterns
Parsed IOC Types	Select which IOCs types to parse for with the operation. Options include: <ul style="list-style-type: none">• MD5 (default)• SHA-1 (default)• SHA-256 (default)• SHA-384• CIDR Block (default)• URL (default)• FQDN (default)• Email Address• IP Address (default)• Filename• File Path
Default IOC Status	Select the default status of IOCs that are automatically ingested into the platform. This option only applies when you have disabled the Dry Run option.

Configuration Parameters

Dry Run

If disabled, this action will automatically upload the parsed context to ThreatQ. Indicators will be added with the "Review" status.

Select Parsers

Change Log

- **Version 1.1.0**
 - Added support for the Asset object type and the following custom objects: IMEI, Organization, Compromised Account, Compromised Card, Money Mule, Cluster, Compromised Asset, Hunt Mission, Malware Analysis, Monitoring, Persona, RFI, Suspected Incident, Threat Assessment.
- **Version 1.0.1**
 - The ACE library dependency is now embedded with the operation and no requires manual installation.
 - Updated the minimum ThreatQ version to 5.15.0
- **Version 1.0.0**
 - Initial release
