Support

This integration is designated as **ThreatQ Supported**.

Support Email: support@threatq.com

Support Web: <https://support.threatq.com>

Support Phone: 703.574.9893

Integrations/apps/add-ons designated as **ThreatQ Supported** are fully supported by ThreatQuotient's Customer Support team.

ThreatQuotient strives to ensure all ThreatQ Supported integrations will work with the current version of ThreatQuotient software at the time of initial publishing. This applies for both Hosted instance and Non-Hosted instance customers.

ThreatQuotient does not provide support or maintenance for integrations, apps, or add-ons published by any party other than ThreatQuotient, including third-party developers.

Integration Details

ThreatQuotient provides the following details for this integration:

Current Integration Version 3.0.2

**Compatible with ThreatQ
Versions** $\geq 4.47.0$

Support Tier ThreatQ Supported

Introduction

The VirusTotal operation enriches ThreatQ objects with context obtained from the VirusTotal API.

The operation provides the following actions:

- **submit_ip** - submits IP for analysis.
- **submit_domain** - submits domain for analysis.
- **submit_url** - submits URL for analysis.
- **submit_hash** - submits hash for analysis.

The operation is compatible with the following indicator types:

- MD5
- SHA-1
- SHA-256
- FQDN
- IP Address
- URL

Installation

Perform the following steps to install the integration:

The same steps can be used to upgrade the integration to a new version.

1. Log into <https://marketplace.threatq.com/>.
2. Locate and download the integration .whl file.
3. Navigate to the integrations management page on your ThreatQ instance.
4. Click on the **Add New Integration** button.
5. Upload the integration file using one of the following methods:
 - Drag and drop the file into the dialog box
 - Select **Click to Browse** to locate the integration file on your local machine

ThreatQ will inform you if the operation already exists on the platform and will require user confirmation before proceeding. ThreatQ will also inform you if the new version of the operation contains changes to the user configuration. The new user configurations will overwrite the existing ones for the operation and will require user confirmation before proceeding.

The operation is now installed and will be displayed in the ThreatQ UI. You will still need to [configure and then enable](#) the operation.

Configuration

ThreatQuotient does not issue API keys for third-party vendors. Contact the specific vendor to obtain API keys and other integration-related credentials.

To configure the integration:

1. Navigate to your integrations management page in ThreatQ.
2. Select the **Operation** option from the *Type* dropdown (optional).
3. Click on the integration entry to open its details page.
4. Enter the following parameters under the **Configuration** tab:

PARAMETER	DESCRIPTION
API Key	Your private or public VirusTotal API Key.
Automatically Add Attributes	If checked, indicator attributes are added automatically.
Automatically Add Indicators	If checked, related indicators, along with their attributes, are added automatically. If not checked, the user can select which indicators to be added (without their attributes).

5. Review any additional settings, make any changes if needed, and click on **Save**.
6. Click on the toggle switch, located above the *Additional Information* section, to enable it.

Actions

The VirusTotal operation provides the following actions:

ACTION	DESCRIPTION	OBJECT TYPE	OBJECT SUBTYPE
submit_ip	Submits IP for analysis	Indicator	IP
submit_domain	Submits domain for analysis	Indicator	FQDN
submit_url	Submits URL for analysis	Indicator	URL
submit_hash	Submits hash for analysis	Indicator	MD5, SHA-1, SHA-256

All Actions

All actions (submit_ip, submit_domain, submit_url, submit_hash) use the same mapping and configuration options provided below.

```
GET https://www.virustotal.com/api/v3/{vt_collection_name}/{ioc_value}
```

vt_collection_name represents the plural form of the object type as it appears in VirusTotal, while ioc_value represents the actual value of the objects for all indicators except for URLs. The URLs are first encoded to Base64.

ThreatQuotient provides the following default mapping for this action:

FEED DATA PATH	THREATQ ENTITY	THREATQ OBJECT TYPE OR ATTRIBUTE KEY	PUBLISHED DATE	EXAMPLES	NOTES
.attributes.url	Related Indicator.Value	N/A	N/A	www.rigpriv.com/upload	For URLs relationships
.attributes.md5	Related Indicator.Value	N/A	N/A	e2f6cdade9be842ebd160 634c30f1e16	For Referrer MD5 relationship
.attributes.sha1	Related Indicator.Value	N/A	N/A	ccbbc621afe012b358ed2e 13875f1581b944dd25	For Referrer SHA-1 relationship
.attributes.sha256	Related Indicator.Value	N/A	N/A	56e784268807ee237adbd 98046f0090ceecdfde6d2e1 326afd3670e4e3ffd23	For Referrer SHA-256 relationship
.context_attributes. first_seen_date	Indicator.Attribute	Historical SSL certificate	N/A	1591571057	For Historical SSL certificate relationship
.id	Related Indicator.Value	View the Relationships table above	N/A	www.rigpriv.com	For all other relationships
N/A	Related Indicator.Attribute	VirusTotal Link	N/A	https:// www.virustotal.com/ gui/ip-address/194. 180.191.124	Formatted based on the type of the indicator and it's value. For URL indicators the url is encoded using base64 format
N/A	Related Indicator.Attribute	Relationship	N/A	True	Represents the relationship with the data collection indicator as it appears in the ThreatQ Configuration column from the Relationship table above

Relationships Mapping

The available relationships are shown in the following table:

VIRUSTOTAL COLLECTION NAME	VIRUSTOTAL RELATIONSHIP	THREATQ CONFIGURATION	ACCESSIBILITY
domains	ns_records	DNS NS	VT Premium users only
domains	soa_records	SOA	VT Premium users only
domains	mx_records	MX Records	VT Premium users only
domains	urls	Immediate Parent	Everyone
domains	parent	Parent	Everyone
domains	siblings	Siblings	Everyone
domains	immediate_parent	Immediate Parent	Everyone
domains	subdomains	Subdomains	Everyone
domains	urls	URLs	VT Premium users only
ip_addresses	historical_ssl_certificates	Historical SSL certificates	Everyone
ip_addresses	urls	URLs	VT Premium users only

VIRUSTOTAL COLLECTION NAME	VIRUSTOTAL RELATIONSHIP	THREATQ CONFIGURATION	ACCESSIBILITY
urls	last_serving_ip_address	Last Serving IP address	Everyone
urls	contacted_domains	Contacted Domains	VT Premium users only
urls	redirecting_urls	Redirecting URLs	VT Premium users only
urls	referrer_files	Referrer Files	VT Premium users only
urls	referrer_urls	Referrer URLs	VT Premium users only

Action Parameters

Each action provides the following configuration parameters:

PARAMETER	DESCRIPTION
API Key:	Private or public VirusTotal API key.
Automatically add attributes	If checked, Indicator attributes are added automatically.
Automatically add indicators	If checked, Indicator are added automatically.
Malicious Verdict Threshold	The minimum number of AV scans reporting the IOC as malicious. Passing this threshold will result in an attribute of "Malicious: True" to be added.
AV Scan Information	Number of reports from URL scanners marking it as harmless, suspicious, malicious or undetected
Supporting Context (for File Hash Submission)	Extra information to fetch, File Type, First Published Date, Meaningful Name, Names and VirusTotal Link
Synonymous Hashes (for File Hash Submission)	Which indicator type should be ingested into ThreatQ for File Hash Submission (MD5, SHA-256, SHA-1)
Set synonymous hash status to...	The status of the ingested IOCs.
Supporting Context (for FQDN Submission)	Which data should be used to enrich the IOC for FQDN Submission.
Relationships (for FQDN Submission)	The Relationships data to be retrieved from VirusTotal (for FQDN Submission).
Set related indicator status to...	The status of the related indicators (for FQDN, IP Address and URL Submission)

PARAMETER	DESCRIPTION
Supporting Context (for IP Address Submission)	Which data should be used to enrich the IOC for IP Address Submission.
Relationships (for IP Address Submission)	The Relationships data to be retrieved from VirusTotal (for IP Address Submission).
Supporting Context (for URL Submission)	Which data should be used to enrich the IOC for URL Submission.
Relationships (for URL Submission)	The Relationships data to be retrieved from VirusTotal (for URL Submission).

Change Log

- **Version 3.0.2**
 - Resolved the following issues:
 - no results would be returned for non-malicious IOCs.
 - If supporting context endpoints are not licensed, no enrichment would be returned at all.
 - (UX issue) when submitting URLs, it would only show the raw response.
 - Attribute names for Related Files are now displayed as Related <hash type>.
 - Attribute Redirecting URL now includes the URL value rather than its ID.
 - Added an info block when malicious count > 0, but the malicious threshold was not met.
 - Renamed attributes to better illustrate what they represent.
 - Added support for the Reputation attribute.
- **Version 3.0.1**
 - Updated the operation for improved reentrancy.
- **Version 3.0.0**
 - Updated the API to match VirusTotal API V3.
 - Performed functionality improvements to the actions.
 - Performed UI enhancements.
- **Version 2.3.0**
 - Submit URL - FQDN indicators can't be submitted through this action anymore
 - Submit IP - .asn attribute ingested as ASN indicator
 - Minor tweaking for ingested attributes
- **Version 2.2.2**
 - Minor UI Enhancements
 - Improved error handling
 - Removed .undetected_urls parsing for IPs and FQDNs
 - Added Automatically add attributes and Automatically add indicators user fields
- **Version 2.2.1**
 - Improved enrichment attributes UI formatting
- **Version 2.2.0**
 - Improve UI messages, add new user field, mapping changes
- **Version 1.0.0**
 - Initial release
